About the Author	V
Foreword	XIII
Introduction	XVII
Acronyms and General Notations	XXIX
1 Management and Risk	1
1.1 History of interrelation of management and risk	1
1.2 Reasons and consequences of large accidents	10
1.3 The most dangerous industry branches	11
1.4 Sources of accidents depending on humans	12
1.5 Risk management and insurance	13
1.6 Monitoring and risk	14
1.7 The state safety program of Russia	15
1.8 Methods of nonlinear mechanics and probability theory ...	16
1.9 Power rating distributions of data of developing processes ..	21
1.10 Concrete mathematics	24
1.11 Scenario of LP-management of non-success risk	25
2 The Human Being and Risks	27
2.1 Frauds in business	27
2.2 Errors of personnel	28
2.3 Asymmetric actions of terrorists	28
2.4 Hacker attacks on informational networks	29
2.5 Personnel in modern civilization	29
3 Principles of Risk Management in Design	35
3.1 Style, concepts, and methods of designers	35
3.2 Axioms for construction of technology of risk management ..	37

- 3.3 Models and rules 38
- 3.4 Occam’s razor 39
- 3.5 The transparency of risk models in business 40
- 3.6 The admitted values of parameters 41
- 3.7 Scheme of complex object management 43
- 3.8 Minimization of the number of decisions 44
- 3.9 Structural design 46
- 3.10 Concept of the acceptable risk 47
- 3.11 Markowitz’s and VaR-approach to investment risk 49
- 3.12 Active and passive management of risk 52
- 3.13 Algorithmic calculations 54
- 3.14 Arithmetical and logical addition 55

- 4 Risk Management at Debugging Tests 59**
 - 4.1 Definition of debugging tests 59
 - 4.2 Analysis of debugging process 61
 - 4.3 Management of debugging process 62
 - 4.4 Technology of debugging tests 64
 - 4.5 Non-success risk scenarios of debugging 65
 - 4.6 Construction of the criterion of debugging difficulty 70
 - 4.7 Construction of the logic and probabilistic model
of debugging non-success risk 72
 - 4.8 Example of development of the debugging program 74
 - 4.9 Operating tests 76
 - 4.10 Evolutional tests (ETs) 81
 - 4.11 Conclusions 81

- 5 Risk Management in Operation on Basis of Monitoring 83**
 - 5.1 Destruction, wearing, and deterioration of equipment
in operation 83
 - 5.2 Monitoring in engineering 84
 - 5.3 Monitoring infrastructure of rocket launcher 85

- 6 Risk Management of Dangerous Plant 93**
 - 6.1 Difficult problems 93
 - 6.2 Management of risk 95
 - 6.3 Financing the risk management process 107
 - 6.4 Reliability regulation of engineering and a person 111
 - 6.5 Consideration of natural and man-caused accidents 112
 - 6.6 Probability of poor organization 112

- 7 Transparency of Methods for Estimation of Risk 115**
 - 7.1 Scoring methods of the object classification 115
 - 7.2 Risk estimation method requirements 123
 - 7.3 Transparency of estimation methods of credit risks 127
 - 7.4 Accuracy and robustness of credit risk estimation 128

7.5	Specialization of banks and their risk models	128
7.6	Axioms and models of credit risks	129
7.7	Bank management by risk criterion	130
7.8	Conclusions	133
8	Bases of Logic and Probabilistic Calculus	135
8.1	Some information from Boolean algebra	135
8.2	Basic logical operations	136
8.3	Basic definitions and accepted notations	140
8.4	Theorems of Boolean algebra and probabilistic logic	144
9	LP-Modeling and Analysis of Risk in Engineering	149
9.1	Basic concepts and definitions of the theory of safety	149
9.2	The basic principles of the LP-method	150
9.3	Transformation of L-function to P-polynomial	152
9.4	“Weight” of the argument in the L-function	154
9.5	Importance of elements in a system	157
9.6	Example of construction of the L-function of danger	158
9.7	Explosion in a submarine: scenario and risk LP-model	159
9.8	Risk LP-model of the structural-complex system	165
10	Automated Structural and Logical Modeling	169
10.1	Problems of LP-modeling	169
10.2	Risk scenario of a railway accident	171
10.3	Idea of development of LP-modeling	171
10.4	Basic stages of LP-modeling	173
10.5	Algorithmic methods of primary structural and logical modeling	174
10.6	Graphical-analytic method of determination of L-function	179
10.7	Combined method of construction of P-polynomials	184
10.8	Calculation of standard P-characteristics of systems	186
11	Logical and Probabilistic Theory of Risk with Groups of Incompatible Events	189
11.1	Converting database to knowledgebase	190
11.2	Structure risk models	192
11.3	Groups of incompatible events and the property of orthogonality	194
11.4	Logical and probabilistic risk models	198
11.5	Risk parameters, measure of risk, and cost of risk	199
11.6	Applications of the risk LP-theory with GIE	202
11.7	Procedures of construction and use of the risk LP-model with the GIE	204
11.8	The basic equations for GIE and Bayes’ formulas	207
11.9	Risk LP-models for the limited number of events	211

11.10	Dynamic risk LP-models	212
11.11	Combined risk LP-models	214
12	Identification of Risk LP-Models with Groups of Incompatible Events	215
12.1	Statement of identification problem	216
12.2	Basic statements of identification algorithm	217
12.3	Identification by methods of random search	219
12.4	Identification by the gradient method	227
12.5	Identification criteria of the credit risk LP-models	234
12.6	Investigations on identification of risk LP-models	238
12.7	Accuracy and robustness of risk LP-models	242
13	LP-Analysis of Risk in Systems with Groups of Incompatible Events	245
13.1	Statistical risk analysis	245
13.2	Combinatorial risk analysis	246
13.3	Logical-probabilistic risk analysis	251
13.4	Transparency of risk LP-models	252
13.5	Management of risk	253
14	Software for Assessment, Analysis, and Management of Risk	255
14.1	Intellectual work station for safety management	255
14.2	Software for risk LP-models with the GIE	258
14.3	Software for structural and logic modeling	264
14.4	Software for LP-models on the basis of the cortege algebra	269
14.5	Description of software working on the ASM technology	276
15	LP-Model of Credit Risk for Natural Persons	279
15.1	Description of credit and data presentation	280
15.2	Model of credit risk for natural persons and rice for risk	282
15.3	Identification of risk LP-model and analysis of risk	285
15.4	Transparency of assessment method of credit risk	287
15.5	Transparency of results of risk assessment and analysis	288
15.6	Comparison of LP method by accuracy and robustness with other methods	292
15.7	Investment at LP-model with data of the real bank	294
15.8	Conclusions	299
16	LP-Model of Credit Risk for Juridical Persons	301
16.1	Credit risk methods to Western market	301
16.2	Credit risk methods according to Russian market	305

16.3	LP-model of credit risk for Russian market	307
16.4	Software for estimation and analysis of credit risks	311
16.5	Conclusions	320
17	Scenario Logic and Probabilistic Risk Models of Bribes . . .	321
17.1	Problems of bribes and corruption	321
17.2	Axioms of the bribe theory	322
17.3	The LP-theory of bribes with groups of incompatible events	323
17.4	The bribe LP-model at institutions	325
17.5	The bribe LP-model on the basis of officials' behavior	328
17.6	The bribe LP-model on the basis of analysis of service parameters	332
17.7	Conclusion	336
18	LP-Model of Security Portfolio Risk	339
18.1	Selection of the optimum portfolio by VaR	340
18.2	Selection of the optimal security portfolio by <i>LP-VaR</i>	342
18.3	Portfolio with independent yields of stocks	346
18.4	Portfolio with dependent yields of stocks	349
18.5	Portfolio with stock yields depending on external factor	351
18.6	Comparison of portfolio modeling methods by <i>LP-VaR</i>	352
18.7	Examples of portfolio optimization by LP-VaR	355
18.8	Efficiency of portfolio management by <i>LP-VaR</i>	358
18.9	Portfolio risk with dependent yields of stocks on basis of copula functions	361
18.10	Conclusions	368
19	Risk LP-Models of Quality and Efficiency	371
19.1	General problem of quality management in business	371
19.2	Particular problems of quality loss risk	375
19.3	Modeling risk in problems of efficiency	375
20	LP-Models of Company Management Non-success Risk . . .	383
20.1	Problem statement	383
20.2	LP-models of management non-success risk	384
20.3	Model of management non-success risk in functions	385
20.4	Model of management non-success risk in directions of activities	386
20.5	Management of company as complex object	387
20.6	Models of non-success risk in accomplishing objective or group of objectives	388
20.7	Model of quality loss risk in company operation	390
20.8	Conclusions	395

21 LP-Models of Fraud and Interaction of Companies	397
21.1 Fraud of manager	397
21.2 Fraud of worker	399
21.3 Fraud with investigation	401
21.4 Struggle of building firms for profitable contract	403
21.5 Financing building projects with reservation	404
22 The Formal LP-Theory of Non-success Risk with GIE	407
22.1 Connection of database, knowledgebase, and sets	407
22.2 Sets	408
22.3 Relations	412
22.4 The signature	413
22.5 Axioms of the formal risk theory	414
22.6 The mathematical apparatus of derivation	416
23 Training Course “Modeling, Estimation, and Analysis of Risks in Economics”	419
23.1 Features and advantages of the risk LP-theory	419
23.2 Application of the risk LP-modeling and analysis	420
23.3 Purpose and problems of the training course	421
23.4 Themes of lectures	422
23.5 Laboratory works	422
23.6 The list of indexes	424
23.7 Software for identification of risk LP-models with GIE	425
23.8 Software for LP-modeling of security portfolio risk	426
23.9 Software for automated structurally logic modeling of risks	426
Conclusion	429
