Contents

1 Introduction 1
1.1 Examples of Antennas and Telescopes 1
1.1.1 NASA Deep Space Network 1
1.1.2 Large Millimeter Telescope 1
1.1.3 ESA Deep Space Antennas 2
1.1.4 Atacama Large Millimeter Array 2
1.1.5 Thirty Meter Telescope 3
1.1.6 Green Bank Telescope 4
1.1.7 Effelsberg Telescope 4
1.2 Short Description of the Antenna Control System 5
1.2.1 Velocity Loop 6
1.2.2 Position-Loop 7
1.3 Antenna and Telescope Literature 7
References 8

Part I Modeling

2 Analytical Models 11
2.1 Rigid Antenna Model 11
2.2 Structural Model 12
2.2.1 Finite-Element Model 12
2.2.2 Modal Model 14
2.2.3 State-Space Model 17
2.2.4 Models with Rigid Body Modes 19
2.2.5 Discrete-Time Model 21
2.3 Drive Model 24
2.3.1 Motor Model 24
2.3.2 Reducer Model 25
2.3.3 Drive Model 25
2.4 Velocity Loop Model 26
2.5 Drive Parameter Study 26
2.5.1 Drive Stiffness Factor 27

2.5.2 Drive Inertia Factor 28
References 30

3 Models from Identification 31
3.1 White Noise Testing of the Antenna 31
3.1.1 Purpose and Conditions 31
3.1.2 Test Input and Output 32
3.1.3 Test Configuration 32
3.1.4 Data Processing 34
3.1.5 Basic Relationships for the Discrete-Time Data 37
3.2 Identification of the Velocity Loop Model 38
3.2.1 Description of the Velocity Loop Model 39
3.2.2 Identification of the Velocity Loop Model 39
3.2.3 A Comparison of the Analytical and Identified Models 41
3.2.4 Azimuth Model Depends on the Antenna Elevation Position 41
3.2.5 Fundamental Frequency Depends on Antenna Diameter 43
References 44

4 Model Reduction 45
4.1 Why Reduction? 45
4.2 Balanced Model Reduction 45
4.3 Modal Model Reduction 47
4.3.1 Norms of a Single Mode 47
4.3.2 Norms of a Structure 48
4.4 Antenna Model Reduction 49
References 50

5 Wind Disturbance Models 51
5.1 Steady-State Wind Disturbance Model 51
5.1.1 Dimensionless Wind Torques 52
5.1.2 Obtaining Wind Torques from Field Data 54
5.1.3 Comparing Wind Tunnel Results and the Field Data 56
5.2 Wind Gusts Disturbance Models 59
5.2.1 Model of Wind Forces Acting on the Dish 60
5.2.2 Model of Wind Torque Acting at the Drives 64
5.2.3 Algorithm to Generate a Time Profile of Wind Gusts Torque 65
5.2.4 Model of Wind at the Velocity Input 66
5.2.5 Algorithm to Generate Time Profile of Wind at the Velocity Input 67
5.2.6 The Equivalence of Wind Torque and Wind Velocity Models 67
5.2.7 Closed Loop Pointing Accuracy with Wind Gusts Disturbances 68
References 70

Part II Control

6 Preliminaries to Control 73
6.1 Performance Criteria 73
6.2 Transformations of the Velocity Loop Model 77
6.2.1 Transformation into Modal Coordinates 78
6.2.2 Antenna Position as the First State 78
6.2.3 Augmentation with the Integral of the Position 78
References 79

7 PI and Feedforward Controllers 81
7.1 Properties of the PI Controller 81
7.1.1 Closed Loop Transfer Functions 83
7.1.2 The Proportional Gain Analysis 83
7.1.3 The Integral Gain Analysis 85
7.2 PI Controller Tuning Steps 86
7.3 Closed Loop Equations of a Flexible Antenna with a PI Controller 87
7.4 Performance of the PI Controller 87
7.4.1 Performance Characteristics 87
7.4.2 Limits of Performance 90
7.5 Feedforward Controller 91
References 93

8 LQG Controller 95
8.1 Properties of the LQG Controller 95
8.1.1 LQG Controller Description 95
8.1.2 Tracking LQG Controller 98
8.1.3 Closed Loop Equations of the Tracking LQG Control System 101
8.1.4 LQG Weights 101
8.1.5 Resemblance of the LQG and PI Controllers 104
8.1.6 Properties of the LQG Weights 105
8.1.7 Limits of the LQG Gains 107
8.2 LQG Controller Tuning Steps 108
8.3 Performance of the LQG Controller 110
8.3.1 Summary of the Antenna Servo Performance Characteristics 110
8.3.2 Performance of the DSN Antennas with LQG Controllers 111
8.3.3 Disturbance Rejection Properties and the Position-Loop Bandwidth 113
8.3.4 Performance Comparison of the PI and LQG Controllers 115
8.3.5 Limits of Performance 117

8.4 Tuning a LQG Controller Using GUI 117
8.4.1 Selecting LQG Weights 117
8.4.2 GUI for the LQG Controller Tuning 119
8.4.3 Fine Tuning of the LQG Controller 121
8.5 LQG Controller in the Velocity Loop 124
8.5.1 Position Loop Bandwidth Depends on the Velocity Loop . . . 124
8.5.2 Four Control Configurations 127
8.5.3 PP Control System 127
8.5.4 PL Control System 129
8.5.5 LP Control System 132
8.5.6 LL Control System 132
References 133

9 H_∞ Controller 135
9.1 Definition and Gains 135
9.2 Tracking H_∞ Controller 138
9.3 Closed-Loop Equations of the Tracking H_∞ Controller 138
9.4 34-M Antenna Example 139
9.5 Limits of Performance 141
References 142

10 Single Loop Control 145
10.1 Rigid Antenna 145
10.1.1 Rigid Antenna with Velocity and Position Loops 145
10.1.2 Rigid Antenna with Position Loop Only 147
10.1.3 Simulation Results 148
10.2 34-M Antenna 149
References 155

11 Non-Linear Control 157
11.1 Velocity and Acceleration Limits 157
11.1.1 Command Preprocessor 157
11.1.2 Anti-Windup Technique 162
11.2 Friction 166
11.2.1 Dry Friction Model 168
11.2.2 Low-Velocity Tracking Using Dither 170
11.2.3 Non-linear Simulation Results 173
11.3 Backlash 174
11.3.1 Backlash and Its Prevention 175
11.3.2 The Velocity Loop Model with Friction and Backlash 177
References 181

12 RF Beam Control 183
12.1 Selecting the RF Beam Controller 183
12.2 Monopulse 187

12.2.1 Command following . . . 187
12.2.2 Disturbance Rejection Properties . . . 188
12.2.3 Stability Due to the Gain Variation . . . 190
12.2.4 Performance Simulations: Linear Model . . . 190
12.2.5 Performance Simulations: Nonlinear Model . . . 191
12.3 Scanning . . . 194
12.3.1 Conical Scan . . . 194
12.3.2 Sliding Window Conscan . . . 200
12.3.3 Lissajous Scan . . . 201
12.3.4 Rosette Scan . . . 204
12.3.5 Performance Evaluation . . . 206
