Preface	v
1 Physical Experiments and Computer Experiments	1
1.1 Introduction	1
1.2 Some Examples of Computer Models	3
1.2.1 Evolution of Fires in Enclosed Areas	4
1.2.2 Design of Prosthesis Devices	6
1.2.3 Formation of Pockets in Sheet Metal	7
1.2.4 Other Examples	9
1.3 Organization of the Book	12
2 Preliminaries	13
2.1 Introduction	13
2.2 Defining the Experimental Goal	15
2.2.1 Introduction	15
2.2.2 Research Goals for Mono-Inputs Codes	15
2.2.3 Research Goals for Mixed-Inputs	17
2.2.4 Multiple-Output Experiments	20
2.3 Modeling Output from Computer Experiments	21
2.3.1 Introduction	21
2.3.2 Gaussian Random Function Models	25
2.3.3 The Correlation Function of a Gaussian Random Function Model	29

2.3.4	Using the Correlation Function to Specify a GRF with Given Smoothness Properties	35
2.3.5	Hierarchical Gaussian Random Field Models	43
3	Predicting Output from Computer Experiments	47
3.1	Introduction	47
3.2	Prediction Basics	48
3.2.1	Classes of Predictors	48
3.2.2	Best MSPE Predictors	49
3.2.3	Best Linear Unbiased MSPE Predictors	56
3.3	Prediction for Computer Experiments	59
3.3.1	Prediction When the Correlation Function Is Known	60
3.3.2	Prediction When the Correlation Function Is Unknown	62
3.4	Chapter Notes	80
3.4.1	Proof That (3.2.21) Is a BLUP (page 59)	80
3.4.2	Proof That (3.3.4) Is a BLUP (page 61)	81
3.4.3	Implementation Issues	82
3.4.4	Alternate Predictors	84
4	Additional Topics in Prediction Methodology	85
4.1	Predictive Distributions	85
4.1.1	Introduction	85
4.1.2	Predictive Distributions When σ_z^2 , \mathbf{R} , and \mathbf{r}_0 Are Known	86
4.1.3	Predictive Distributions When \mathbf{R} and \mathbf{r}_0 Are Known	92
4.1.4	Prediction Distributions When Correlation Param- eters Are Unknown	94
4.2	Prediction for Multiple Response Models	99
4.2.1	Introduction	99
4.2.2	Modeling Multiple Outputs	100
4.2.3	Optimal Predictors for Multiple Outputs	103
4.2.4	Examples	105
4.3	Chapter Notes	114
5	Space-Filling Designs for Computer Experiments	119
5.1	Introduction	119
5.1.1	Some Basic Principles of Experimental Design	119
5.1.2	Design Strategies for Computer Experiments	122
5.2	Designs Based on Methods for Selecting Random Samples	123
5.2.1	Designs Generated by Elementary Methods for Selecting Samples	123
5.2.2	Designs Generated by Latin Hypercube Sampling	125
5.2.3	Properties of Sampling-Based Designs	130
5.2.4	Variations on Latin Hypercube Designs	134

5.3	Designs Based on Measures of Distance	136
5.4	Uniform Designs	139
5.5	Combined Design Criteria	146
5.6	Chapter Notes	149
5.6.1	Details of the Inequality (5.2.2) for Proportional Stratified Sampling with Random Sampling	149
5.6.2	Proof That T_L is Unbiased and of Theorem 5.2.1	150
5.6.3	The Use of LHDs in a Regression Setting	155
5.6.4	Other Space-Filling Designs	156
6	Some Criterion-based Experimental Designs	159
6.1	Introduction	159
6.2	Designs Based on Entropy and Mean Squared Prediction Error Criterion	160
6.2.1	Maximum Entropy Designs	160
6.2.2	Mean Squared Prediction Error Designs	164
6.3	Designs Based on Optimization Criteria	168
6.3.1	Introduction	168
6.3.2	Bernardo Multi-Stage Approximation	169
6.3.3	The Surrogate Management Framework Algorithm	170
6.3.4	Criteria-Based Optimization	173
6.3.5	Heuristic Global Optimization	174
6.3.6	Constrained Global Optimization	181
7	Sensitivity Analysis, Validation, and Other Issues	185
7.1	Sensitivity Analysis	185
7.1.1	Introduction	185
7.1.2	Scatterplots and Correlations	186
7.1.3	Regression Modeling	187
7.1.4	The Method of Sobol' and ANOVA-Type Decompositions	189
7.1.5	Summary	192
7.2	Model Validation	193
7.2.1	Introduction	193
7.2.2	Related Problems	194
7.2.3	Assessing Validation	196
A	List of Notation	199
A.1	Abbreviations	199
A.2	Symbols	200
B	Mathematical Facts	203
B.1	The Multivariate Normal Distribution	203
B.2	The Non-Central Student t Distribution	206
B.3	Some Results from Matrix Algebra	207

C PErK: Parametric Empirical Kriging	209
C.1 Introduction	209
C.2 PErK Job File Options and Output	212
C.3 Examples	218
References	245
Subject Index	265
Author Index	271
