1 Introduction 1
References 8

2 Mathematical Background 13
2.1 Linear Algebra 13
2.1.1 Vectors and Vector Spaces 13
2.1.2 Matrices 17
2.1.3 Matrix Decomposition 23
2.2 Mathematical Analysis 26
2.2.1 Sequences 27
2.2.2 Series 30
2.2.3 Hilbert Spaces, Sequence Spaces and Function Spaces . . 33
2.2.4 Fourier Series 38
2.3 Optimization Theory 41
2.3.1 Vector Derivatives 42
2.3.2 Necessary and Sufficient Conditions for Solutions 45
2.3.3 Gradient-Type Optimization Methods 48
2.4 Least-Squares Method 62
2.4.1 Full-Rank Overdetermined Least-Squares Problem 64
2.4.2 Generic Least-Squares Problem 65
2.5 Summary 67
Appendix 2A Proof of Theorem 2.15 68
Appendix 2B Some Terminologies of Functions 72
Appendix 2C Proof of Theorem 2.33 74
Appendix 2D Proof of Theorem 2.36 75
Appendix 2E Proof of Theorem 2.38 76
Appendix 2F Proof of Theorem 2.46 77
Problems 79
Computer Assignments 81
References 81

3 Fundamentals of Statistical Signal Processing 83
3.1 Discrete-Time Signals and Systems 83
3.1.1 Time-Domain Characterization 83
3.1.2 Transformation Tools 86
3.1.3 Transform-Domain Characterization 91
3.2 Random Variables 96
3.2.1 Statistical Characterization 96
3.2.2 Moments 99
3.2.3 Cumulants 104
3.2.4 Some Useful Distributions 109
3.3 Random Processes 119
3.3.1 Statistical Characterization 119
3.3.2 Stationary Processes 123
3.3.3 Cyclostationary Processes 139
3.4 Estimation Theory 147
3.4.1 Estimation Problem 147
3.4.2 Properties of Estimators 150
3.4.3 Maximum-Likelihood Estimation 158
3.4.4 Method of Moments 160
3.4.5 Minimum Mean-Square-Error Estimation 164
3.4.6 Wiener Filtering 166
3.4.7 Least-Squares Estimation 169
3.5 Summary 172
Appendix 3A Relationship between Cumulants and Moments 172
Appendix 3B Proof of Theorem 3.47 173
Appendix 3C Proof of Theorem 3.52 174
Problems 175
Computer Assignments 178
References 180

4 SISO Blind Equalization Algorithms 183
4.1 Linear Equalization 183
4.1.1 Blind Equalization Problem 183
4.1.2 Peak Distortion and MMSE Equalization Criteria 187
4.2 SOS Based Blind Equalization Approach: Linear Prediction 190
4.2.1 Forward and Backward Linear Prediction 191
4.2.2 Levinson–Durbin Recursion 196
4.2.3 Lattice Linear Prediction Error Filters 202
4.2.4 Linear Predictive Deconvolution 205
4.3 HOS Based Blind Equalization Approaches 209
4.3.1 Maximum Normalized Cumulant Equalization Algorithm 211
4.3.2 Super-Exponential Equalization Algorithm 214
4.3.3 Algorithm Analyses 221
4.3.4 Algorithm Improvements 226

4.4 Simulation Examples for Algorithm Tests . . . 231
4.5 Some Applications . . . 235
4.5.1 Seismic Exploration . . . 236
4.5.2 Speech Signal Processing . . . 245
4.5.3 Baud-Spaced Equalization in Digital Communications . . 252
4.6 Summary and Discussion . . . 265
Appendix 4A Proof of Property 4.17 . . . 267
Problems . . . 268
Computer Assignments . . . 269
References . . . 270

5 MIMO Blind Equalization Algorithms . . . 275
5.1 MIMO Linear Time-Invariant Systems . . . 275
5.1.1 Definitions and Properties . . . 275
5.1.2 Smith–McMillan Form . . . 281
5.2 Linear Equalization . . . 286
5.2.1 Blind Equalization Problem . . . 287
5.2.2 Peak Distortion and MMSE Equalization Criteria . . . 290
5.3 SOS Based Blind Equalization Approaches . . . 292
5.3.1 Blind SIMO Equalization . . . 292
5.3.2 Blind MIMO Equalization . . . 300
5.4 HOS Based Blind Equalization Approaches . . . 304
5.4.1 Temporally IID Inputs . . . 305
5.4.2 Temporally Colored Inputs . . . 314
5.5 Algorithm Tests . . . 318
5.6 Summary and Discussion . . . 325
Appendix 5A Proof of Property 5.34 . . . 326
Appendix 5B Proof of Property 5.35 . . . 328
Appendix 5C A GCD Computation Algorithm . . . 329
Problems . . . 330
Computer Assignments . . . 330
References . . . 331

6 Applications of MIMO Blind Equalization Algorithms . . . 335
6.1 Fractionally Spaced Equalization in Digital Communications . . 335
6.2 Blind Maximum Ratio Combining . . . 340
6.3 SIMO Blind System Identification . . . 342
6.3.1 MIMO-MNC Equalizer–System Relation . . . 344
6.3.2 Analysis on System Identification Based on MIMO-MNC Equalizer–System Relation . . . 345
6.3.3 SIMO Blind System Identification Algorithm . . . 346
6.4 Multiple Time Delay Estimation . . . 351
6.4.1 Model Assumptions . . . 351
6.4.2 MTDE with Space Diversity Gain . . . 352
6.5 Blind Beamforming for Source Separation . . . 357

6.5.1 Model Assumptions . . . 357
6.5.2 Blind Beamforming . . . 358
6.5.3 Multistage Source Separation . . . 359
6.6 Multiuser Detection in Wireless Communications . . . 362
6.6.1 Model Assumptions and Problem Statement . . . 363
6.6.2 Signature Waveform Matched Filtering Based Multiuser Detection . . . 364
6.6.3 Chip Waveform Matched Filtering Based Multiuser Detection . . . 369
6.6.4 Multiple Antennas Based Multiuser Detection . . . 375
6.7 Summary and Discussion . . . 378
Appendix 6A Proof of Theorem 6.3 . . . 379
Appendix 6B Proof of Fact 6.4 . . . 380
Appendix 6C Proof of Property 6.10 . . . 381
Appendix 6D Multichannel Levinson Recursion Algorithm . . . 383
Appendix 6E Integrated Bispectrum Based Time Delay Estimation . 385
Problems . . . 387
Computer Assignments . . . 387
References . . . 388

7 Two-Dimensional Blind Deconvolution Algorithms . . . 391
7.1 Two-Dimensional Discrete-Space Signals, Systems and Random Processes . . . 391
7.1.1 2-D Deterministic Signals . . . 391
7.1.2 2-D Transforms . . . 393
7.1.3 2-D Linear Shift-Invariant Systems . . . 395
7.1.4 2-D Stationary Random Processes . . . 400
7.2 2-D Deconvolution . . . 402
7.2.1 Blind Deconvolution Problem . . . 402
7.2.2 Peak Distortion and Minimum Mean-Square-Error Deconvolution Criteria . . . 404
7.3 SOS Based Blind Deconvolution Approach: Linear Prediction . 406
7.4 HOS Based Blind Deconvolution Approaches . . . 409
7.4.1 2-D Maximum Normalized Cumulant Deconvolution Algorithm . . . 409
7.4.2 2-D Super-Exponential Deconvolution Algorithm . . . 413
7.4.3 Improvements on 2-D MNC Deconvolution Algorithm . . 416
7.5 Simulation . . . 418
7.6 Summary and Discussion . . . 423
Problems . . . 424
Computer Assignments . . . 424
References . . . 425

8 Applications of Two-Dimensional Blind Deconvolution Algorithms 427
8.1 Nonparametric Blind System Identification and Texture Synthesis 427
8.1.1 Nonparametric 2-D BSI 428
8.1.2 Texture Synthesis 434
8.2 Parametric Blind System Identification and Texture Image Classification 438
8.2.1 Parametric 2-D BSI 439
8.2.2 Texture Image Classification 449
8.3 Summary and Discussion 454
Appendix 8A Proof of Property 8.2 455
Appendix 8B Proof of Property 8.3 456
Appendix 8C Proof of Theorem 8.6 458
Appendix 8D Proof of Fact 8.9 459
Problems 460
Computer Assignments 460
