List of Figures xiii
List of Tables xxi

1 Introduction 1
1.1 Introduction and Definitions 1
1.2 Historical Background of Digital Protective Relaying Algorithms . . 2
1.3 Development of Protective Relaying Algorithms 3
1.3.1 Sinusoidal Waveform-Based Algorithms 3
1.3.2 Digital Filtering Techniques 4
1.3.3 Least Squares-Based Methods 4
1.3.4 Differential Equation Methods 5
1.3.5 Protection Based on Transient Signals 5
1.3.6 Adaptive Protection 5
1.3.7 Artificial Neural Networks for Protective Relaying 6
1.3.8 Wavelet Transform Methods 6
1.4 Introduction of Mathematical Morphology to Protective Relaying of Power Systems 7
1.5 Contents of This Book 10

2 Mathematical Morphology 13
2.1 Introduction 13
2.2 Basic Morphological Operators 15
2.2.1 Definitions for Binary Operations 15
2.2.2 Set Representations of Functions 18
2.2.3 Grey-Scale Dilation and Erosion 20
2.3 Morphological Filters 22
2.3.1 Definitions of Morphological Filters 22
2.3.2 Opening and Closing 22
2.3.3 Alternating Sequential Filters 24
2.4 The Lifting Scheme and Morphological Wavelets 25

2.4.1 The Multi-resolution Decomposition Scheme 25
2.4.2 The Lifting Scheme 26
2.4.3 Morphological Wavelets 29
2.4.4 The Multi-resolution Morphological Gradient Algorithm . . . 35
2.5 Summary 37

3 Phasor Measurement 41
3.1 Introduction 41
3.2 Phasor Measurement Methods 42
3.2.1 The Mann and Morrison Algorithm 42
3.2.2 The Rockefeller and Udren Algorithm 43
3.2.3 The Full-Cycle Fourier Transform 44
3.2.4 The Half-Cycle Fourier Transform 45
3.2.5 The Least Squares Error Algorithm 46
3.3 Power System Faults 47
3.3.1 Fault Characteristics 47
3.3.2 Influence of Exponentially Decaying DC Offset on FT Accuracy 48
3.4 Morphological Transform for DC Offset Removal 49
3.5 Results of Simulations and Discussions 55
3.6 Summary 56

4 Protection of Transmission Lines 57
4.1 Introduction 57
4.2 The Adaptive Distance Relaying Algorithm 59
4.2.1 Fault Detection 59
4.2.2 Fault Classification 61
4.2.3 Fault Location 62
4.3 Implementation of ADRA 67
4.3.1 Calculation of the Fault Distance by RLS 67
4.3.2 Settings for the Variable Tripping Zone 69
4.4 Simulation Studies and Results of ADRA 70
4.4.1 Ground Faults with Ground-Fault Resistance 71
4.4.2 Other Types of Faults 74
4.4.3 External Faults 77
4.5 Protection of a Double Circuit Transmission Line 78
4.6 The Fault Phase Selector 79
4.7 Simulation Results and Discussions on Fault Phase Selection 82
4.7.1 Single Line Faults 84
4.7.2 Line-to-Line Faults 86
4.7.3 Simultaneous Faults on Both Line Circuits 87
4.8 Summary 89

5 Transformer Protection 93
5.1 Introduction 93
5.2 Transformer Differential Protection 95
5.3 Transformer Magnetising Inrush 97
5.3.1 The Magnitude of Magnetising Inrush Current 97
5.3.2 Harmonics of Magnetising Inrush Current 100
5.3.3 The Second-Harmonic Restrained Differential Protection of Transformers 102
5.4 Morphological Identification of Inrush 103
5.4.1 A Morphological Decomposition Scheme for Inrush Detection 103
5.4.2 A Multi-resolution Decomposition Scheme for Inrush Identification 107
5.5 Simulation Studies and Results Analysis 109
5.5.1 A Transformer Model 109
5.5.2 Application of MDS for Inrush Detection 112
5.5.3 Evaluation of MRDS for Inrush Identification 117
5.6 Further Discussion of the MM-Based Schemes for Inrush Identification 123
5.7 Summary 124

6 Bus Protection 125
6.1 Introduction 125
6.2 Bus Differential Protection 126
6.3 Current Transformers for Bus Protection 126
6.4 Current Transformer Problems 127
6.5 Saturation of Current Transformers 129
6.6 A Morphological Lifting Scheme for Detection of CT Saturation . . . 130
6.7 A Compensation Algorithm for Distorted Secondary Current 131
6.8 Case Studies 133
6.8.1 Tests Undertaken at Different Levels of Residual Flux 133
6.8.2 Compensation Results 135
6.9 Summary 138

7 Ultra-High-Speed Protection 139
7.1 Introduction 139
7.2 Principles of UHS Protection 141
7.2.1 Transient-Based Directional Protection 141
7.2.2 Faults in the Forward Direction 142
7.2.3 Faults in the Reverse Direction 144
7.2.4 Fault Phase Selection 145
7.3 UHS Directional Protective Relaying 146
7.3.1 A Solid Fault in the Forward Direction 147
7.3.2 A High Ground-Fault Resistance Fault in the Forward Direction 150

7.3.3 A Fault with Low Inception Angle in the Reverse Direction . 152
7.3.4 A Solid Fault at the Busbar in the Reverse Direction 154
7.3.5 Faults of Different Types, Locations, Directions and Inception Angles 156
7.3.6 Phase Selection with Different Fault Types 160
7.4 Summary 160

8 Fault Location on Transmission Lines 165
8.1 Introduction 165
8.2 Principles of Fault Location 166
8.2.1 Transient-Based Positional Protection 167
8.2.2 Type A: A Passive Method Single-Ended Fault Locator 168
8.2.3 Type D: A Passive Method Double-Ended Fault Locator . . . 171
8.2.4 Type E: An Active Method Single-Ended Fault Locator 171
8.2.5 Online Measurement of the Transient Wave Propagation Speed 172
8.3 Noise Removal of Transients 173
8.3.1 The Edge-Avoiding Prediction 173
8.3.2 Morphological Edge Reorganisation 174
8.3.3 Noise Filtering 175
8.4 Accurate Fault Location by Morphological Filters 176
8.4.1 A Solid Phase-A-Ground Fault 176
8.4.2 A Double-Phase-to-Ground Fault 178
8.4.3 A Fault Close to the Busbar 180
8.4.4 A Fault with a Stable Low Resistance 180
8.4.5 Switching-In Transients 182
8.4.6 Calculated Transient Wave Propagation Speed and Fault Locations 183
8.5 Morphological Undecimated Wavelet Decomposition for Fault Location 184
8.5.1 Morphological Undecimated Wavelets 184
8.5.2 Fault Location Using MUDW 185
8.6 Summary 190

A Electromagnetic Transient Analysis of Transmission Lines 191
A.1 Distributed Parameter Model of Transmission Lines 191
A.2 Transient Wave Propagation Characteristics 193
A.3 Incidence, Reflection and Refraction of Transients 195
