Contents

1 Overview 1
1.1 The Origin and Development of Chaos Theory 1
1.2 Control of Chaos 3
1.2.1 Suppression of Chaos 4
1.2.2 Synchronization of Chaos 6
1.2.3 Control and Synchronization of Spatiotemporal Chaos 9
1.3 Anticontrol of Chaos 10
1.4 Summary 12
References 13

2 Preliminaries of Nonlinear Dynamics and Chaos 17
2.1 Introduction 17
2.2 Background 18
2.3 Existence, Uniqueness, Flow, and Dynamical Systems 20
2.3.1 Existence and Uniqueness 20
2.3.2 Flow and Dynamical Systems 22
2.4 Equilibrium, Periodic Orbit, Quasiperiodic Orbit, and Poincaré Map 24
2.4.1 Equilibrium of Continuous-Time Systems 24
2.4.2 Periodic and Quasiperiodic Orbits 25
2.4.3 Poincaré Map 28
2.5 Invariant and Attracting Sets 29
2.6 Continuous-Time Systems in the Plane 31
2.7 General Solutions of Discrete-Time Linear Systems 37
2.8 Discrete-Time Systems in the Plane 38
2.9 Stabilities of Trajectories I: The Lyapunov First Method 43
2.9.1 The Definition of Lyapunov Stability 43
2.9.2 Floquet Theory 49
2.10 Stabilities of Trajectories II: The Lyapunov Second Method 50
2.11 Chaotic Sets and Chaotic Attractors 53
2.12 Symbolic Dynamics and the Shift Map 54
2.13 Lyapunov Exponent 57

2.14 Examples 59
2.14.1 Tent Map and Logistic Map 59
2.14.2 Smale Horseshoe 62
2.14.3 The Lorenz System 66
2.15 Basics of Functional Differential Equations Theory 71
2.16 Summary 75
References 76

3 Entrainment and Migration Control of Chaotic Systems 77
3.1 Introduction 77
3.2 Basics on Entrainment and Migration 78
3.2.1 Entrainment Control 78
3.2.2 Attractor Selection by Migration Control 80
3.3 OPCL Control Scheme 84
3.4 Global Control of a Class of Continuous-Time Polynomial Chaotic Systems 85
3.4.1 OPNCL Control Scheme 85
3.4.2 Simulations 89
3.5 Global Control of a Class of Discrete-Time Systems 95
3.5.1 OPNCL Control for Discrete-Time Systems 95
3.5.2 Simulations 97
3.6 Summary 101
References 102

4 Feedback Control of Chaotic Systems 103
4.1 Introduction 103
4.2 Model-Reference Adaptive Control of a Class of Discrete-Time Chaotic Systems 104
4.2.1 Basic Formulation 104
4.2.2 Main Results 105
4.2.3 Simulations 108
4.3 Model-Reference Adaptive Control of a Class of Continuous-Time Chaotic Systems 111
4.3.1 Basic Formulation 111
4.3.2 Main Results 112
4.3.3 Simulations 116
4.4 Control of a Class of Chaotic Systems Based on Inverse Optimal Control 125
4.4.1 Problem Description 125
4.4.2 Inverse Optimal Controller Design 126
4.4.3 Simulations 130
4.5 Summary 130
References 131

5 Synchronizing Chaotic Systems Based on Feedback Control 133
5.1 Introduction 133
5.2 Synchronization of Continuous-Time Chaotic Systems with a Single Input 134
5.2.1 Basic Formulation 134
5.2.2 Main Results 136
5.2.3 Simulations 137
5.3 Synchronization of Multi-Signals in Continuous-Time Chaotic Systems 142
5.3.1 Basic Formulation 142
5.3.2 Main Results 145
5.3.3 Simulations 146
5.4 Synchronization of Different Continuous-Time Chaotic Systems . . . 150
5.4.1 Synchronization of Different Chaotic Systems with Parameter Perturbations 150
5.4.2 Simulations 151
5.5 Synchronization of Discrete-Time Chaotic Systems 157
5.5.1 Basic Formulation 157
5.5.2 Main Results 159
5.5.3 Simulations 164
5.6 Summary 167
References 168

6 Synchronizing Chaotic Systems via Impulsive Control 169
6.1 Introduction 169
6.2 Complete Synchronization of a Class of Chaotic Systems via Impulsive Control 170
6.2.1 System Description and the Synchronization Problem 170
6.2.2 Main Results 171
6.2.3 Simulations 176
6.3 Lag-Synchronization of the Unified Systems via Impulsive Control . 180
6.3.1 Preliminaries 181
6.3.2 Main Results 183
6.3.3 Simulations 186
6.4 Impulsive Synchronization of Different Chaotic Systems 187
6.4.1 System Description and Synchronization Problem 188
6.4.2 Main Results 189
6.4.3 Simulations 194
6.5 Impulsive Synchronization of a Class of Chaotic Delayed Neural Networks 198
6.5.1 Preliminaries 198
6.5.2 Main Results 200
6.5.3 Simulations 204
6.6 Summary 206
References 206

7 Synchronization of Chaotic Systems with Time Delay 209
7.1 Introduction 209
7.2 Adaptive Synchronization of a Class of Delayed Chaotic Systems . . 210
7.2.1 Adaptive Synchronization of the Delayed Chen Chaotic Systems 210
7.2.2 Adaptive Synchronization of the Delayed Lorenz Systems . . 216
7.3 Adaptive Synchronization Between Two Different Delayed Chaotic Systems 221
7.3.1 Adaptive Synchronization Between Delayed Chen Chaotic Systems and Delayed Lorenz Chaotic Systems 222
7.3.2 Adaptive Synchronization Between Two Different Delayed Ikeda Chaotic Systems 229
7.3.3 Adaptive Synchronization Between Two Different Delayed Liao Chaotic Systems 233
7.4 Synchronization of Chaotic Delayed Neural Networks 238
7.4.1 Synchronization of a Class of Chaotic Delayed Neural Networks Based on Inverse Optimal Control Theory 238
7.4.2 Adaptive Synchronization Between Two Different Chaotic Delayed Neural Networks 252
7.5 Summary 266
References 267

8 Synchronizing Chaotic Systems Based on Fuzzy Models 269
8.1 Introduction 269
8.2 Modeling Chaotic Systems via T–S Fuzzy Models 270
8.3 Synchronization of Hyperchaotic Systems via T–S Fuzzy Models . . 277
8.3.1 Fuzzy Modeling of Hyperchaotic Systems 277
8.3.2 Synchronization of Two Different Hyperchaotic Systems . . . 289
8.3.3 Simulations 291
8.4 Synchronizing Fuzzy Chaotic Systems with Time-Varying Delays . . 298
8.4.1 Basic Formulation 298
8.4.2 Main Result 300
8.4.3 Simulations 302
8.5 Summary 306
References 306

9 Chaotification of Nonchaotic Systems 309
9.1 Introduction 309
9.2 Chaotification of Discrete-Time Fuzzy Hyperbolic Model with Uncertain Parameters 310
9.2.1 Basic Formulation 310
9.2.2 Main Results 312
9.2.3 Simulations 315
9.3 Chaotification of Continuous-Time Fuzzy Hyperbolic Model Using Impulsive Control 318

9.3.1 Basic Formulation 318
9.3.2 Main Results 320
9.3.3 Simulations 323
9.4 Chaotification of Linear Systems Using Sampled Data Control 327
9.4.1 Basic Formulation 327
9.4.2 Main Results 328
9.4.3 Simulations 336
9.5 Summary 339
References 340
