1	Introduction to Semiconductor Lasers	1
1.1	Semiconductor Gain Media	1
1.1.1	Heterostructure Lasers	2
1.1.2	Quantum Well Semiconductor Lasers	2
1.1.3	Quantum Dot Semiconductor Lasers	3
1.2	Laser Cavities	4
1.2.1	In-Plane Edge-Emitting Lasers	4
1.2.2	Vertical-Cavity Surface-Emitting Lasers	5
1.2.3	High-Power Laser Amplifiers	6
1.2.4	Optically Pumped Lasers	7
1.3	Microlasers	7
1.3.1	Optical Microcavities	8
1.3.2	Photonic Bandgap Laser	9
	References	9
2	Semiconductor Laser Theory:	
	The Maxwell–Bloch Equations	13
2.1	Optical Field Dynamics	15
2.2	Carrier Dynamics	18
2.3	Temperature Dynamics	21
	References	23
3	The Active Carrier Plasma:	
	Ultrafast Microscopic Dynamics	
	and Spatio-Spectral Gratings	25
3.1	Semiconductor Laser Maxwell–Bloch–Langevin Equations: A Dual-Field Approach	25
3.2	Nonlinear Gain and Index-Dynamics: Picosecond Pulse Propagation	28
3.2.1	Time Scales	28
3.2.2	Non-Equilibrium Wigner Distributions	29
3.3	Nonlinear Femtosecond Dynamics of Ultrashort Light Pulses .	34
3.3.1	Ultrafast Gain Dynamics	35
3.3.2	Ultrafast Nonlinear Propagation Effects	37
3.3.3	Dynamic Spectral Properties	38

3.4	Ultrafast Active Phase Conjugation	40
3.4.1	Spatio-Temporal Wave-Mixing	40
3.4.2	Nonequilibrium Gain and Refractive Index Distributions	42
3.4.3	Spatio-Temporal Dynamics of the Phase Conjugation .	45
3.4.4	Spatio-Temporal Response of the Phase Conjugating Mirror	46
3.5	Conclusion	48
	References	48
4	High-Speed Dynamics of Semiconductor Lasers	51
4.1	Introduction: Transverse and Longitudinal Mode Dynamics ..	51
4.2	Multi-Mode Maxwell–Bloch Equations	54
4.3	Transverse Coupling and of a Twin-Stripe Laser	56
4.4	High-Frequency Modulation of Segmented Contact Semiconductor Lasers	59
4.5	Conclusion	63
	References	64
5	Polarization Fluctuations and Dynamics of Vertical-Cavity Surface-Emitting Lasers	65
5.1	Spatially Resolved Polarization and Temperature Dynamics in Quantum Well Vertical-Cavity Surface-Emitters	66
5.1.1	Light-Field Dynamics and Carrier Transport	67
5.1.2	Bloch Equations for Quantum Well Vertical-Cavity Surface-Emitting Lasers	68
5.1.3	Spatio-Temporal Dynamics	76
5.2	Polarization fluctuations in VCSELs	79
5.2.1	The ‘Split-Density’ Rate Equation Model	79
5.2.2	Spin Dynamics	82
5.2.3	Fluctuation Dynamics of the Non-Lasing Polarization .	83
5.2.4	Amplified Spontaneous Emission Spectra of the Non-Lasing Polarization	84
5.2.5	Fluctuations of the Stokes Parameters	87
5.2.6	Spectra at the Spin Flip Transition	89
5.3	Conclusion	92
	References	93
6	Nonlinear Pulse Propagation and Solitons in Active Semiconductor Media	95
6.1	Pulse Propagation in Nonlinear Semiconductor Media	96
6.1.1	Dynamic Pulse Shaping	96
6.1.2	Spatial Amplification and Wave-Guiding	99
6.2	Solitons in Partially Coherent Active Semiconductor Media ..	102
6.2.1	Spatio-Temporal Refractive Index and Gain Dynamics	105
6.2.2	Dynamic Spatio-Spectral Dispersion Compensation . . .	107

6.3	Conclusion	109
	References	109
7	Spatio-Spectral Wave Mixing in High-Power Amplifier and Laser Systems	113
7.1	Introduction	113
7.2	Modelling of Optical Injection	114
7.3	Continuous-Wave Laser Amplifiers	115
7.3.1	Spatio-Spectral Wave Mixing	116
7.3.2	Optimization of the Tapered Geometry	119
7.4	Laser Amplifiers with Pulsed Injection	130
7.4.1	Dynamic Wave Mixing and Pulse Shaping	131
7.4.2	Dynamics of Induced and Spontaneous Emission	133
7.4.3	Self Phase Modulation	136
7.5	Conclusion	139
