<b>1</b>	<b>Stability of Two Rubber Balloons</b> .....	1
<b>2</b>	<b>Kinetic Theory of Rubber</b> .....	7
2.1	Rubber Elasticity is “Entropy Induced” .....	7
2.2	Entropy of a Rubber Molecule .....	10
2.3	The Rubber Molecule with Arbitrarily Oriented Links .....	12
2.4	Entropy and Disorder, Entropic Elasticity .....	14
2.5	Entropy of a Rubber Bar .....	14
2.6	Uniaxial Force-Stretch Curve .....	16
2.7	Biaxial Loading .....	17
2.8	Application to a Balloon .....	19
2.9	Criticism of the Kinetic Theory of Rubber .....	20
<b>3</b>	<b>Non-linear Elasticity</b> .....	21
3.1	Deformation Gradient and Stress-Stretch Relation .....	21
3.2	Material Symmetry and Isotropy .....	22
3.3	Material Objectivity .....	24
3.4	Representation of an Isotropic Function .....	24
3.5	Incompressibility. Mooney-Rivlin Material .....	26
3.6	Biaxial Stretching of a Mooney-Rivlin Membrane .....	27
3.7	Free Energy .....	27
3.8	Rubber Balloon with the Mooney-Rivlin Equation .....	28
3.9	Surface Tension .....	29
3.10	Cylindrical Balloon .....	30
3.11	Treloar’s Biaxial Experiment .....	32
<b>4</b>	<b>Biaxial Stretching of a Rubber Membrane – A Paradigm of Stability, Symmetry-Breaking, and Hysteresis</b> .....	35
4.1	Load-Deformation Relations of a Biaxially Loaded Mooney-Rivlin Membrane .....	35
4.2	Deformation of a Square Membrane Under Symmetric Loading .....	35
4.3	Stability Criteria .....	37
4.4	Minimal Free Energy .....	38
4.5	Free Enthalpy, Gibbs Free Energy .....	39

4.6	Symmetry Breaking	41
4.7	Hysteresis	43
4.8	Non-monotone Force-Stretch Relation	44
4.9	Hysteresis and Breakthrough. Dissipation	46
4.10	A Three-Dimensional View	47
4.11	Comparison with Treloar's Dead Loading Experiment	48
4.12	Experimental Evidence for Bifurcation	50
<b>5</b>	<b>Stability of a Single Balloon</b>	<b>51</b>
5.1	Pressure-Radius Characteristic and Filling-Radius Characteristic	51
5.2	Pressure-Filling Curve	52
5.3	Free Energy-Radius Relation of the Balloon	52
5.4	Stability and Non-monotonicity	53
5.5	Suggestive Stability Criterion	57
5.6	A Hydrostatic Device for Controlling the Inflation of a Balloon	61
<b>6</b>	<b>Stepwise Inflation of a Balloon</b>	<b>63</b>
6.1	Stages of One Stroke of Inflation	63
6.2	Partial Equilibria	64
6.3	Stepwise Inflation for a Stiff Spring	66
6.4	Stepwise Inflation for a Soft Spring	66
6.5	Dissipation	67
6.6	Minima of Available Free Energy	67
<b>7</b>	<b>Two Balloons – Revisited</b>	<b>69</b>
7.1	Equilibria in the $(r_1, r_2)$ -Diagram	69
7.2	Investigation of Stability	71
7.3	Energy Landscape	73
7.4	Simultaneous Inflation-Deflation Experiment. Hysteresis	76
<b>8</b>	<b>Many Balloons – The Emergence of a Pseudoelastic Hysteresis</b>	<b>79</b>
8.1	Simultaneous Inflation of Four Balloons	79
8.2	Ten Balloons	80
8.3	Many Balloons	83
8.4	Phase Transition and Pseudoelasticity	84
<b>9</b>	<b>Stability of the Spherical Shape</b>	<b>87</b>
9.1	Rotational But Not Spherical Symmetry?	87
9.2	A Modicum of Surface Geometry	87
9.3	Balance of Forces	89
9.4	Motion, Stretches, Surface Stress, and Pressure	90
9.5	Equilibrium Conditions	91

9.6 Testing Stability of the Spherical Solution ..... 92

9.7 Discussion ..... 95

**10 Stress-Induced Crystallization of Rubber ..... 97**

10.1 Phenomenon ..... 97

10.2 The “Mechanism” of Crystallization ..... 98

10.3 Free Energy of Crystallizing Rubber ..... 100

10.4 Hysteresis and Residual Stretch ..... 102

**11 History of Rubber and Its Use..... 105**

**References ..... 111**

Chapter 1 (Young-Laplace Equation) ..... 111

Chapter 2 (Kinetic Theory of Rubber) ..... 112

Chapter 3 (Non-linear Elasticity) ..... 114

Chapter 4 (Plane Square Membrane) ..... 115

Chapter 5 Through 8 (One, Two, and Many Balloons) ..... 116

Chapter 9 (Stability of the Spherical Shape) ..... 118

Chapter 10 (Crystallization and Limited Extensibility)..... 119

Chapter 11 (History) ..... 120

**Index ..... 121**
