Contents

1 Problems and Examples 3
- 1.1 Vibrations of Perfectly Flexible Rods 3
- 1.2 Torsional vibrations of rods 16
- 1.3 Extensional vibrations of rods 17
- 1.4 Bending vibrations of rectilinear rods 25
- 1.5 Vibrations of rectilinear and curvilinear rods 33

2 Answers and solutions 43
- 2.1 Vibrations of Perfectly Flexible Rods 43
- 2.2 Torsional vibrations of rods 87
- 2.3 Extensional vibrations of rods 91
- 2.4 Bending vibrations of rectilinear rods 112
- 2.5 Vibrations of rectilinear and curvilinear rods 130

References 179

A Statics of rods: basic equations 181
- A.1 Derivation of nonlinear equations of rod equilibrium 182
- A.2 Transformations of base vectors 184
- A.3 Derivatives of base vectors with respect to arc coordinate s 189
- A.4 Equations relating $æ_j$ to angles ϑ_k 192
- A.5 Vector equation of displacements of points of the rod axial line 194
- A.6 Equation connecting the vectors $\overline{\mathbf{M}}$ and $\overline{\mathbf{æ}}$ 195
- A.7 System of nonlinear equations of rod equilibrium 196
- A.8 Reduction of equations to dimensionless notation 197
- A.9 Boundary conditions 198
- A.10 External load and its behaviour under rod loading process 199
- A.11 Vector nonlinear equations of rod equilibrium in the bound coordinate system 201
- A.12 Equations of rod equilibrium in projections onto bound axes 202
- A.13 Special cases of equilibrium equations 203

B Basic equations of rod kinematics 209
B.1 Time derivatives of vectors of the base $\{\overline{\mathbf{e}}_i\}$ 209
B.2 Absolute and local derivatives of a vector with respect to time 211
B.3 Velocity and acceleration of a point of the rod axial line 212

C Basic equations of rod dynamics 215
C.1 Nonlinear vector equations of motion of three-dimensional curvilinear rods 215
C.2 Reduction of equations to dimensionless form 218
C.3 Equations of small vibrations of rods (linear equations) 219
C.4 Equations of small vibrations in projections onto bound axes . . 221
C.5 Equations of small vibrations of a rod whose axial line in the unloaded state is a plane curve 222

D Exact numerical method of determining the frequencies and modes of rod vibrations 225
D.1 Determination of eigen values (frequencies) 225
D.2 Determination of eigen functions for conservative problems . . . 228

E Approximate numerical determination of frequencies at small vibrations of rods 231

F Approximate solution of equation of rod forced vibrations . 237
