Contents

THEORETICAL APPROACHES

Conservation laws for three-phase partially-saturated granular media 3
Borja, R.I.

Thermally-induced pore pressure generation
in a nearly-saturated cementitious material 15
Selvadurai, A.P.S.

Strain localisation simulation in non-isothermal multiphase geomaterials 29
Sanavia, L., Pesavento, F., and Schrefler, B.A.

Non-linear behaviour in the deformation and localization analysis
of unsaturated soil 41
Ehlers, W., Graf, T, and Ammann, M.

A process-oriented approach to compute THM problems in porous media
Part 1: Theoretical and informatics background..... 53
Kolditz, O., Wang, W., de Jonge, J., Xie, M., and Bauer, S.

The influence of hydraulic hysteresis on unsaturated soils FE analyses..... 67
Tamagnini, R.

Effects of intergranular adhesive force on failure criterion
of granular materials..... 81
Kato, S., Yoshimori, Y., and Sakakibara, T.

A bounding surface plasticity model for sands in an unsaturated state..... 99
Russell, AR.. and Khalili, N.

A unified framework for elastoplasticity of unsaturated soils:
From capillary hysteresis to soil skeletal deformations 111
Muraleetharan, K.K. and Wei, C.

State parameters for unsaturated soils, basic empirical concepts 125
Engel, J., Schanz, T., and Lauer, C.

Investigations regarding soils below phreatic surface
as unsaturated porous media..... 139
Köhler, H.-J. and Montenegro, H.

Inspection of excess pressure propagation in the zone
of gas entrapment below the capillary fringe 159
Montenegro, H., Köhler, H.-J., and Holfelder, T.

A new concept for the numerical simulation and parameter identication
of multiphase flow and transport processes in cohesive soils 173
Hölzemann, S., Class, H., and Helmig, R.

Statistical approach in soil-water characteristic curve modelling 189
Stoimenova, E., Datcheva, M., and Schanz, T.

Generalized effective stress in unsaturated granulate by DEM analysis 201
Jiang, M. and Harris, D.

Grading entropy variation due to soil crushing 215
Lőrincz, J., Gálos, M., and Rajkai, K.

NUMERICAL MODELLING

A process-oriented approach to compute THM problems in porous media
Part 2: Numerical applications 231
Kolditz, O., Wang, W., de Jonge, J., Xie, M., and Bauer, S.

Numerical study to the desiccation cracks formation in mineral liners
for landfills 251
Wendling, S. and Meißner, H.

Modelling the behaviour of an earth and rockfill dam during construction
and impoundment 269
Alonso, E.E., Olivella, S., and Hugas, J.

Numerical simulation of air loss during tunnel advance
in compressed air tunnelling 289
Scheid, Y., Semprich, S., and Chinkulkijniwat, A.

Centrifuge and numerical modeling of contaminant transport
through the unsaturated silty soil 305
Sreedeep, S., Berton, C., Moronnoz, T., and Singh, D. G.

Modeling of seepage flow through layered soils 313
Soraganvi, Veena S., Mohan Kumar, M. S., and Muthineni, S.

Hydro-mechanical behaviour of unsaturated buffer 237
Thomas, H.R., Cleall, P.J., Chandler, N., Dixon, D., and Mitchell, H.P.

Applications of CODE-BRIGHT to thermal-hydro-mechanical experiments on clays..... 341
Zhang, C.-L., Kröhn, K.-P., and Rothfuchs, T.

An unsaturated soil seepage analysis for design of a soil cover system to reduce oxidation of a mine tailings deposit..... 359
Wang, B. and Murray, L.
