

Contents

I	Clinical Issues and Tissue Processing	1
1	Molecular Pathology Laboratory of the Future CHRISTOPHER A. MOSKALUK	3
1.1	The Past	3
1.2	The Present	4
1.3	The Future	8
1.4	A Scenario of the Future of Tissue Diagnostics: A Prostate Biopsy for Assessment of Carcinoma	10
1.4.1	Current Clinical Procedures	10
1.4.2	Future Clinical Procedures	11
1.5	Summary	14
	References	14
2	Clinical Utilities of Microdissected Samples ISSAC YI KIM, DAVID K. ORNSTEIN	17
2.1	Introduction	17
2.2	Current Clinical Uses	17
2.2.1	Diagnosis	17
2.2.2	Prognosis	18
2.2.3	Cytology	19
2.2.4	Detection of Viral DNA	19
2.2.5	Assessment of Gene Copy Numbers	20
2.2.6	Analysis of Cell Cycle Parameters	21
2.2.7	Slide Contamination	22
2.3	Future Clinical Uses: Analysis of Cellular Proteins	22
2.4	Conclusions	23
	References	23

3	Tissue Processing	
	GALLYA GANNOT, JOHN W. GILLESPIE	27
3.1	Introduction	27
3.2	Clinical Aspects	28
3.3	Sample Acquisition and Initial Tissue Handling	28
3.4	Tissue Fixation and Snap-Freezing	29
3.5	Tissue Embedding	33
3.6	Evaluation of New Methods for Handling Clinical Tissue Specimens: Prostate Cancer as an Example of Tissue Handling for Molecular Analysis	34
3.6.1	New Methods of Fixation/Embedding	34
3.6.2	Nonformalin Tissue Fixation	35
3.6.3	Comparison of Histology and Recovery of DNA, RNA, and Proteins	36
3.7	Conclusions and Future Directions	40
	References	41
4	Sample Management and Tracking	
	G. STEVEN BOVA	43
4.1	Introduction	43
4.2	The Tissue Microdissection Core Laboratory: Organization and Basic Data Management	43
4.3	Integrated Data Management for the Tissue-Oriented Biological Research: The Labmatrix System	46
4.3.1	Labmatrix Primary Modules	48
4.3.1.1	Study Subjects	48
4.3.1.2	Biomaterials	49
4.3.1.3	Protocols	49
4.3.1.4	Workflow-Based Data Review: Functional Genomic Status Summarization Method	50
4.3.1.5	Scientific Query Builder	50
4.3.1.6	Equipment and Supplies/Contacts	51
4.3.1.7	Images/Configuration Tools	51
4.3.1.8	Laboratory Administrator	51
4.3.2	Additional Features of Labmatrix Prototype	52
4.3.2.1	Internal Proprietary and Public Reference Databases and Collaboration Features	52
4.3.2.2	Data Security Features and Regulatory Compliance	52
4.3.2.3	Integration with Other Scientific Tools and Technology	52

II	Methods of Tissue Microanalysis	55
5	Tissue Microarrays STEPHEN M. HEWITT	57
5.1	Introduction	57
5.2	Construction of Tissue Microarrays	57
5.3	Tissue Microarrays as a Validation Tool	58
5.4	Immunohistochemistry and Tissue Microarrays	60
5.5	In Situ Hybridization and Tissue Microarrays	63
5.6	Image Capture and Data Analysis	64
	References	66
III	Molecular Analysis of Micodissected Samples	67
6	Methods of Microdissection and New Technologies MICHAEL A. TANGREA, JOHN W. GILLESPIE, MICHAEL J. FLAIG, GALLYA GANNOT, VLADIMIR KNEZEVIC, MICHAEL R. EMMERT-BUCK, RODRIGO F. CHUAQUI	69
6.1	Historical Perspective	69
6.2	Laser-Based Dissection Technologies	71
6.2.1	Laser Capture Microdissection	71
6.2.2	PALM Laser Microdissection and Pressure Catapulting Technology	73
6.2.3	Leica AS LMD	74
6.3	Novel Techniques	74
6.4	Expression Microdissection	75
6.4.1	Future Directions of Expression Microdissection	81
6.5	Layered Expression Scanning	84
6.5.1	Open Layered Expression Scanning System	86
6.5.1.1	Multiple Northern Blots	87
6.5.1.2	Multiplex-Immunoblots	89
6.5.2	Closed Layered Expression Scanning System	90
6.5.3	Other Platforms for the Layered Expression Scanning Technique	92
6.5.4	Future Directions	94
6.6	Conclusion	96
	References	97

7	Standard Diagnostic Techniques	
	SERGIO GONZÁLEZ	101
7.1	Introduction	101
7.2	Diagnostic Histopathology	102
7.3	Immunohistochemistry	102
7.4	In Situ Hybridization and PCR-in situ Hybridization	107
7.5	Microdissection	108
7.6	Closing Remarks	109
	References	109
8	DNA Applications	
	PABLO URIBE, IGNACIO I. WISTUBA	111
8.1	Introduction	111
8.2	DNA Extraction	112
8.3	DNA PCR Amplification	112
8.4	Microsatellite Analysis	113
8.5	Mutation Analysis	114
8.5.1	Single-Strand Conformation Polymorphism	114
8.5.2	Restriction Fragment Length Polymorphism	115
8.6	Gene Methylation Analysis	116
8.7	Clonality Analysis	117
8.7.1	Overview	117
8.7.2	Microsatellite Analysis	118
8.7.3	Gene Mutations	118
8.7.4	X-Chromosome Inactivation	118
8.7.5	Genotyping Assay of the D310 Repeat	120
8.8	Summary	120
	References	121
9	mRNA Applications	
	FATIH OZSOLAK, VERONICA LUZZI, MARK A. WATSON	125
9.1	Introduction	125
9.2	Tissue Selection for Gene Expression Analysis	126
9.3	RNA Isolation	127
9.3.1	Overview	127
9.3.2	Expected Results	129
9.3.3	Troubleshooting	130
9.4	Transcript Amplification	131
9.4.1	Overview	131
9.4.2	Expected Results	132

9.4.3 Troubleshooting 133
 9.5 RT-PCR Validation 135
 9.5.1 Overview 135
 9.5.2 PCR Assay Design 135
 9.5.3 Quantification 137
 9.5.4 Normalization Controls 138
 9.5.5 Expected Results 140
 9.5.6 Troubleshooting 141
 References 143

10 Proteomic Applications

DAVID H. GEHO, LANCE A. LIOTTA, EMANUEL F. PETRICOIN . 145

10.1 Introduction 145
 10.2 Laser Capture Microdissection 148
 10.3 Protein Microarrays 149
 10.4 Mass Spectrometry in Tissue Proteomics 153
 10.5 Conclusions 157
 References 158

11 Protocols for Tissue Handling and Molecular Analysis 163

11.1 Tissue Preparation for Prostate Prepared as Whole-Mount . . . 163
 11.1.1 70% Ethanol Fixation 163
 11.1.2 Embedding 164
 11.1.2.1 Low-Melt Polyester Embedding 164
 11.1.2.2 Paraffin Embedding 165
 11.2 Slide Preparation for Microdissection
 to Perform Subsequent DNA, RNA, and Protein Analysis 166
 11.2.1 Slide Preparation for Laser Capture Microdissection 166
 11.2.1.1 Paraffin-Embedded Sections and Frozen Sections 167
 11.2.1.2 Low-Melt Polyester-Embedded Sections 167
 11.2.2 Slide Preparation for Manual Microdissection 168
 11.2.2.1 Paraffin-Embedded Sections and Frozen Sections 169
 11.2.2.2 Low-Melt Polyester-Embedded Sections 170
 11.3 Techniques of Microdissection 170
 11.3.1 Laser Capture Microdissection 170
 11.3.2 Immuno-Laser Capture Microdissection 171
 11.3.3 Manual Microdissection 172
 11.4 Processing of Microdissected Tissue for Molecular Analysis . . 173
 11.4.1 DNA-Based Studies 173
 11.4.1.1 Protocol from Pathogenetics Unit 173
 11.4.1.2 DNA Extraction (Protocol from Wistuba) 175

- 11.4.2 RNA Isolation 175
 - 11.4.2.1 Isolation of Total RNA from Frozen Microdissected Tissue .. 175
 - 11.4.2.2 Protocol for Isolation of RNA from Frozen LCM Tissue (Protocol from Watson) 177
 - 11.4.2.3 Protocol for Isolation of RNA from Formalin-Fixed, Paraffin-Embedded LCM Tissue (Protocol from Watson) 179
- 11.4.3 Protein-Based Studies 180
 - 11.4.3.1 Sample Preparation for 2-D PAGE 180
 - 11.4.3.2 Immunoblot 181
- 11.5 DNA, RNA, and Protein Analysis 182
 - 11.5.1 DNA Analysis 182
 - 11.5.1.1 Clonality: X-Chromosome Inactivation 182
 - 11.5.1.2 Loss of Heterozygosity 185
 - 11.5.1.3 DNA PCR Amplification (Protocol from Wistuba) 190
 - 11.5.1.4 Analysis of Microsatellite Markers (Protocol from Wistuba) .. 191
 - 11.5.1.5 Single-Strand Conformational Polymorphism (Protocol from Wistuba) 192
 - 11.5.1.6 Restricted Fragment Length Polymorphism (Protocol from Wistuba) 192
 - 11.5.1.7 Gene Methylation Analysis (Protocol from Wistuba) 193
 - 11.5.1.8 Genotyping Assay of the D310 Repeat (Protocol from Wistuba) 193
 - 11.5.1.9 In Situ Hybridization Protocol for Cytomegalovirus (Protocol from González) 194
 - 11.5.2 RNA Analysis 195
 - 11.5.2.1 Gene-Specific RT-PCR 195
 - 11.5.2.2 Targeted Differential Display 197
 - 11.5.2.3 NonIsotopic in Situ Hybridization Protocol for mRNA Detection (Protocol from Gonzalez) 201
 - 11.5.2.4 Protocol for Transcript Amplification (Protocol from Watson) 202
 - 11.5.2.5 Protocol for RT-PCR Validation (Protocol from Watson) 206
 - 11.5.3 Protein Analysis 209
 - 11.5.3.1 2-D Polyacrylamide Gel Electrophoresis 209
 - 11.5.3.2 Immunoblot 214
 - 11.5.3.3 Immunohistochemistry 216
- 11.6 Legal Issues, Informed Consent 220
