

Contents

1 Introduction.....	1
1.1 Classification of Magmatic Sulfide Deposits	1
1.2 Size and Composition of Deposits.....	13
1.3 General Considerations for the Genesis of the Deposits	17
2 Theoretical considerations	21
2.1 The solubility of sulfur in silicate melts	21
2.1.1 Effect of Temperature.....	24
2.1.2 Effect of Pressure.....	25
2.1.3 Influence of felsification of mafic/ultramafic magma	27
2.1.4 Variation of Solubility of Sulfide During Fractional Crystallization of a Layered Intrusion	27
2.2 Partitioning of Chalcophile Metals between Sulfides and Silicate Melts	30
2.2.1 Partitioning of nickel between sulfide and silicate liquids	31
2.2.2 Partitioning of Ni between Olivine and sulfide liquid.....	35
2.2.3 Partitioning of PGE between Sulfide and Silicate Melts	36
2.2.4 Effect of ratio of magma to sulfide.....	40
2.3 Relevant Phase Equilibria.....	42
2.3.1 The System Fe-S-O and its application to natural ore magmas.....	43
2.3.2 Relevant Sulfide Systems	50
2.4 Fractional crystallization of sulfide liquids	57
2.4.1 Partition coefficient of Ni and Cu between mss and coexisting sulfide liquid.....	59
2.4.2 Partition of noble metals.....	59
2.4.3 Modeling of fractional crystallization of sulfide melts.....	62
2.5 External sources of sulfur	63
3 Komatiite-Related Deposits	67
3.1 Archean Komatiite-Related Deposits	67
3.2.1 General information about Archean komatiites and associated mineralization	67

Contents

3.1.2 Deposits of the Wiluna-Norseman greenstone belt (Eastern Goldfields, Western Australia).....	71
3.2 Early Proterozoic Komatiite-Related Deposits	97
3.2.1 Deposits of the Cape Smith belt, Quebec, Canada	101
3.2.2 Deposits of the Thompson Nickel Belt, Manitoba, Canada .	118
4 Ore deposits associated with flood basalt volcanism	137
4.1 Ni-Cu-PGE deposits of the Noril'sk region, Siberia	139
4.1.1 Geological Setting	141
4.1.2 Permo-Triassic Volcanism	144
4.1.3 Ore-Bearing and Related Intrusions	163
4.1.4 Ore Deposits	195
4.1.5 Summary of the model for the Noril'sk Ore Camp	238
4.2 Mineralization of the Lake Superior Region (North America)....	239
4.2.2 Duluth Complex	246
4.2.3 Crystal Lake Gabbro.....	257
4.2.4 Conclusions arising from Keweenawan Mineralization.....	258
4.3 Deposits Associated with the Karoo Flood Basalt of Southern Africa.....	259
4.3.1 General information.....	259
4.3.2 Geology of the Insizwa Complex	261
4.3.3 The Insizwa intrusion at Waterfall Gorge	264
4.3.4 Petrography.....	269
4.3.5 Mineralogy and Mineral Chemistry	270
4.3.6 Evidence relating to Contamination and Ore Genesis at Waterfall Gorge	273
4.3.7 Conclusions for the Insizwa Complex	276
4.4 Flood Basalt Provinces as Environments for Mineralization	277
5 Deposits of the Pechenga area, Russia	279
5.1 Regional geology	279
5.2 Geology of the Pechenga Structure	280
5.3 Geochemistry of Ferropicritic Rocks.....	287
5.4 Comagmatic Relationship between the Ferropicritic Volcanic rocks and the Ore-bearing Gabbro-wehrlite Intrusions	288
5.5 Gabbro-wehrlite intrusions	290
5.6 Magmatic Sulfide Deposits	296
5.6.1 General information.....	296
5.6.2 Sulfur isotopic Composition of Ores and Country rocks.....	297
5.6.3 Ni, Cu and PGE variations and Re-Os isotopic systematics of the Ores and Ore-bearing Intrusions	301
5.7 A Genetic Model for the Pechenga Ores	304

Contents

6 Voisey's Bay and other deposits , Labrador, Canada.....	307
6.1 History of discovery and exploration	307
6.2 General geology.....	307
6.3 Geology of the Voisey's Bay intrusion	310
6.4 Petrography of Rock Types	320
6.5 Olivine and Plagioclase Compositions	323
6.5.1 Stratigraphic Variation in Olivine and Plagioclase Composition	323
6.5.2 Ni and Fo content of Olivine in Different Rock Sequences .	325
6.6 Geochemistry of Voisey's Bay Rocks.....	327
6.6.1 Major Elements.....	327
6.6.2 Trace Elements	329
6.6.3 Isotope Geochemistry	335
6.7 Mineralization within the Voisey's Bay Intrusion.....	338
6.7.1 Types of Mineralization.....	338
6.7.2 The Ni and Cu content of Sulfide Mineralization from Different Mineralized Environments.....	341
6.7.3 Noble metal content of Sulfides from Different Mineralised Environments.....	350
6.7.4 Sulfur Isotopes.....	356
6.8 Geological Model	357
6.9 Conclusions as to the genesis of the Voisey's Bay Deposit	360
6.10 Other deposits associated with the Nain Plutonic Suite	361
6.10.1 Troctolite/gabbro related	361
6.10.2 Mineralization associated with Anorthosites.....	370
6.10.3 Mineralization associated with Ferrodiorites.....	371
6.10.4 Lessons to be learned from the Mineralization associated with the Nain Plutonic Suite	372
7 The Jinchuan deposit, China	373
7.1 Geology of the deposit.....	374
7.2 Petrography.....	375
7.3 Geochemistry Of The Intrusive Rocks	379
7.3.1 Major elements	379
7.3.2 Trace elements.....	384
7.4 Olivine Compositions	384
7.5 Petrogenesis	387
7.5.1 MgO/(MgO+FeO) ratio of the parental magma	387
7.5.2 Composition of the parental magma.....	387
7.5.3 Constraints on Magma Emplacement and Differentiation ...	389
7.6 Sulfide Mineralization	391
7.6.1 Geology of the Ore Bodies	391

Contents

7.6.2 Geochemistry of Sulfide Ores	393
7.7 Metallogenesis	402
7.8 Genetic model for the Jinchuan deposit.....	403
8 Deposits of the Sudbury Camp, Ontario, Canada	405
8.1 Some History	405
8.2 Geology	406
8.2.1 Regional Setting	406
8.2.2 Geology of the Sudbury Structure	408
8.2.3 Evidence for Explosive Nature of the Sudbury Structure	413
8.3 Units of the Sudbury Igneous Complex.....	416
8.3.1 Main Mass	417
8.3.2 Sublayer and its Inclusions	420
8.3.3 Offsets.....	424
8.4 Geochemistry of the Sudbury Igneous Complex.....	424
8.4.1 Major Elements	424
8.4.2 Trace Elements	429
8.4.3 Isotopes.....	436
8.5 Sulfide Ore Deposits.....	439
8.6 Metal contents of different Ore Deposit Types	449
8.7 Ore mineralogy	451
8.8 Relationship of Ore Deposits to the Rocks of the Complex	457
8.9 Discussion of the Origin of the SIC and its Mineralization.....	458
8.9.1 Impact Events	458
8.9.2 Development of the SIC and its Associated Mineralization.	461
8.10 Conclusions	477
9 Platinum group element (PGE) deposits.....	481
9.1 PGE in Mantle-derived Rocks and Mafic/Ultramafic Lavas	481
9.2 Mechanisms for the Concentration of PGE	489
9.3 Classification of PGE deposits on their Morphology and composition	492
9.4 Deposits in layered intrusions.....	495
9.4.1 Bushveld Complex	496
9.4.2 Stillwater Complex.....	523
9.4.3 Great Dyke of Zimbabwe	532
9.4.4 Munni Munni Complex, Western Australia	538
9.4.5 Layered intrusions of Northern Finland	540
9.4.6 Intrusions of Sudbury area in Central Ontario, Canada.....	554
9.4.7 Intrusions in East Greenland.....	561
9.4.8 The Sonju Lake Intrusion, Duluth Complex.....	564
9.4.9 Genetic Models for Deposits in Layered Intrusions	566

Contents

9.5 Non-stratabound Deposits	580
9.5.1 Lac des Iles PGE-bearing Complex.....	580
9.5.2 The Longwoods Igneous Complex, New Zealand.....	591
9.6 Deposits of the Urals Platinum Belt	592
9.6.1 Nizhny Tagil type Mineralization.....	593
9.6.2 Volkovsky and Baron type Deposits	600
9.7 Summary.....	610
10 Summary and use of genetic concepts in exploration.....	613
10.1 Concepts used in Exploration for Ni-Cu Ores	613
10.1.1 Genetic Concepts and their use	613
10.1.2 Empirical Concepts and their use	617
10.1.3 Tectonic Setting of the Deposits.....	618
10.1.4 Methods for Determining whether a given Igneous Body has developed Immiscible Sulfide	627
10.1.5 Use of Cu/Zr Ratios in volcanic rocks and layered intrusions	648
10.1.6 Use of the Noril'sk model in selecting other regions for Exploration	650
10.2 Exploration for PGE in Layered Intrusions: Concepts and Methods	655
10.2.1 Use of Cu/Pd and Cu/Pt ratios in bulk rock compositions (example of the Bushveld Complex)	658
10.2.2 Use of variation of PGE contents in bulk rock compositions and calculated PGE tenors in sulfides (example of the Fox River Sill)	658
Appendix.....	669
References.....	677
Index.....	725
