Part I – Bonding to Enamel

1 Etched Enamel Structure and Topography: Interface with Materials

F.R. TAY, D.H. PASHLEY

| | |
|--|----|
| Introduction | 3 |
| The Enamel Smear Layer: A Potential Problem in Bonding to Cut Enamel | 6 |
| Application of Total-Etch Adhesives to Enamel | 8 |
| Bonding to Phosphoric Acid-Etched Cut Enamel | 9 |
| Bonding to Phosphoric Acid-Etched Uncut Enamel | 10 |
| Bonding to Primary Enamel | 13 |
| Application of Self-Etch Adhesives/Resin Cement to Enamel | 14 |
| Aggressiveness of Self-Etch Adhesives | 15 |
| Bonding to Cut Enamel | 16 |
| Bonding to Uncut Enamel | 21 |
| Interaction of Glass Ionomer-Based Materials with Enamel | 23 |
| Conclusion | 26 |
| References | 27 |

2 Bonding of Resinous Materials on Primary Enamel

A. KAKABOURA, L. PAPAGIANNOLIS

| | |
|-------------------------------|----|
| Introduction | 35 |
| Primary Enamel | 35 |
| Enamel Cleaning | 36 |
| Enamel Conditioning | 37 |
| Phosphoric Acid | 37 |
| Self-Etching Agents | 44 |
| Other Agents | 46 |
| Clinical Results | 47 |
| References | 48 |

3 Bond Strength to Enamel

J.M. POWERS, W.H. TATE

| | |
|---|----|
| Introduction | 53 |
| Measurement of Bond Strength | 53 |
| Debonding Force | 53 |
| Bond Strength | 53 |
| Bond Failure | 54 |
| Bond Strength Measurement by Tensile and Shear Testing | 54 |
| Experimental Models for Evaluating Bond Strength | 56 |
| Clinical Simulation Model | 56 |
| Isolated Interface Model | 57 |
| Clinical Studies | 57 |
| Variables Affecting In Vitro Bond Strength | 57 |
| Differences Among Teeth | 57 |
| Phosphoric Acid | 58 |
| Acidic Primers and Adhesives | 59 |
| Fluoride | 60 |
| Intact Enamel | 61 |
| Caries-Like Lesions | 61 |
| Air Abrasion | 62 |
| Laser Etching | 63 |
| Moisture and Contaminants | 63 |
| Air Thinning | 64 |
| Chlorhexidine | 64 |
| Bleaching | 64 |
| Bonding to Enamel: In Vivo Studies | 65 |
| Veneers | 65 |
| Pit-and-Fissure Sealants | 65 |
| Orthodontic Bonding | 65 |
| References | 67 |

4 Orthodontic Bonding to Wet Enamel with Water-Insensitive and Water-Activated Orthodontic Adhesive Resins

T. ELIADES, G. ELIADES, N. SILIKAS, D.C. WATTS

| | |
|---|----|
| Introduction | 71 |
| Approaches in Assessing the Efficiency of Orthodontic Adhesive Systems | 72 |
| The Reliability of Bond Strength Testing Protocols | 72 |
| The Clinical Relevance of Bond Strength Testing | 74 |
| How Much Strength is Required Clinically? | 75 |
| Clinical Bracket Failure Rate | 76 |

| | |
|--|----|
| Wet-Enamel Adhesives | 76 |
| Structure and Reactivity with Water | 77 |
| Ex vivo and Laboratory Performance | 80 |
| Effect of Water and Contaminants on Orthodontic Adhesive Resins | 80 |
| Effect of Hydration on Resin Matrix | 81 |
| Effect of Hydration on Fillers and Filler–Matrix Interface | 81 |
| Hydrolysis and Degradation of Composite Resins | 82 |
| References | 83 |

Part II – Bonding to Dentine

5 Bonding to Dentin: Smear Layer and the Process of Hybridization

K. VAN LANDUYT, J. DE MUNCK, E. COUTINHO, M. PEUMANS,
P. LAMBRECHT, B. VAN MEERBEEK

| | |
|--|-----|
| Introduction | 89 |
| Dentin Substrate: Smear Layer | 90 |
| Smear Layer | 91 |
| Sono-Abrasion | 95 |
| Air Abrasion | 97 |
| Laser Ablation | 98 |
| Conclusion | 99 |
| Interfaces and Hybridization | 100 |
| Etch-and-Rinse Adhesives | 103 |
| Self-Etch Adhesives | 109 |
| Glass-Ionomer Approach | 114 |
| Conclusion | 115 |
| References | 116 |

6 In Situ Photo-Polymerisation and Polymerisation-Shrinkage Phenomena

D. WATTS, N. SILIKAS

| | |
|---|-----|
| Introduction | 123 |
| Potential Clinical Consequences of Shrinkage Phenomena | 123 |
| Marginal Staining | 124 |
| Fractures | 124 |
| Debonding | 124 |
| Microleakage | 124 |
| Secondary Caries | 124 |
| Postoperative Pain | 124 |

| | |
|---|-----|
| Clinical Management of Shrinkage Phenomena | 125 |
| Light Sources for Photo-Polymerisation of Dental Biomaterials | 125 |
| Quartz-Tungsten-Halogen Sources | 126 |
| Plasma Arc Curing Sources | 126 |
| Laser Sources | 126 |
| Light-Emitting-Diode Sources | 127 |
| Further Variables with Light Sources | 128 |
| Radiometry: Irradiance (Radiant Incidence and Radiant Exitance) and Total Energy Concept | 128 |
| Light Penetration into and Through Oral Biomaterials | 129 |
| Depth of Cure, and Top/Bottom Surface Hardness | 129 |
| Surface Reflection, Absorption and Scattering Processes in Composites | 129 |
| Application of Beer-Lambert Law | 131 |
| Photo-Initiators for Free-Radical and Cationic Polymerisation | 131 |
| Camphorquinone | 132 |
| 1-Phenyl-1,2-propanedione | 133 |
| Photon Numbers and Photo-Initiation | 134 |
| Extent of Polymerisation | 135 |
| Thermal and Spectroscopic Probes | 135 |
| Photo-DSC | 135 |
| FTIR Spectroscopy | 136 |
| NIR Spectroscopy | 136 |
| FT-Raman | 136 |
| Solid-State NMR | 136 |
| EPR Spectroscopy | 136 |
| DMTA and DETA | 137 |
| Development of Mechanical Properties | 137 |
| Surface Hardness | 137 |
| Bulk Elastic and Visco-Elastic Compliance | 137 |
| General Polymerisation Mechanism for Light-Activated Monomers | 137 |
| Steady-State Hypotheses | 138 |
| Polymerisation Kinetics of Light-Activated Resin Composites | 138 |
| Rate of Polymerisation | 139 |
| Normal Termination Model | 139 |
| Auto-Acceleration | 140 |
| Definitions of Polymerisation Shrinkage Phenomena | 141 |
| Polymerisation Shrinkage Strain: | 141 |
| How Much? How Fast? What Direction? | 141 |
| Shrinkage Stress | 142 |

| | |
|---|-----|
| Generation of Stresses in Different Cavity Configurations (C-Factor) | 142 |
| Measurement of Shrinkage Strain | 143 |
| Kinetics of Shrinkage Strain | 144 |
| Relationship Between DC and Shrinkage Strain | 145 |
| Theoretical Relationship Between Conversion and Shrinkage Strain | 145 |
| Experimental Correlations between DC and Shrinkage-Strain Magnitudes . . | 146 |
| Network Variables Beyond <i>Degree of Conversion</i> | 147 |
| Measurement of Shrinkage-Stress Kinetics | 147 |
| Scientific Management of Shrinkage Phenomena | 148 |
| Conclusion | 149 |
| References | 149 |

7 Bonding in Prosthodontics with Cements

A. EL ZOHARY, A.J. FEILZER

| | |
|--|-----|
| Introduction | 155 |
| Luting Cements | 156 |
| Strength and Solubility | 158 |
| Stability and Stiffness | 159 |
| Bonding to Tooth Structure | 159 |
| Bonding to Ceramic | 161 |
| Surface Preparation | 161 |
| Chemical Bonding | 163 |
| Bonding to Pre-Processed Composite Restorations | 165 |
| Biological Considerations | 166 |
| Mechanical Considerations | 166 |
| Curing Strategies | 168 |
| Esthetic Considerations | 168 |
| Color | 168 |
| Color Stability | 169 |
| Value of the Bond Strength Test | 169 |
| References | 170 |

Part III – Bonding to Cementum

8 Composition and Structure of Cementum: Strategies for Bonding

D. TZIAFAS

| | |
|--|-----|
| Introduction | 177 |
| Developmental and Structural Aspects | 178 |
| Cementum Varieties and Their Locations | 178 |
| Cementum Formation | 179 |
| Structural Characteristics of Acellular Extrinsic Fiber Cementum | 180 |
| The Cemento-Enamel and Dentino-Cemental Junctions | 181 |
| Biochemistry of Mature Cementum | 182 |
| Extracellular Matrix | 182 |
| Inorganic Component | 183 |
| Cementum in Health and Disease | 183 |
| Root Permeability | 183 |
| Age Changes in Cementum | 184 |
| Root Surface Caries and Cementum | 184 |
| Changes of Cementum in Periodontally Involved Teeth | 185 |
| Strategies for Bonding to Root Dental Structures | 186 |
| The Problem | 186 |
| Future Directions | 189 |
| References | 190 |
| Subject Index | 195 |
