Contents

Introduction 1

1 Absolute Values 5
1.1 Absolute Values – Completions 5
1.2 Archimedean Complete Fields 12
1.3 Non-Archimedean Complete Fields 18

2 Valuations 25
2.1 Ordered Abelian Groups – Valuations 25
2.2 Constructions of Valuations 31
2.2.1 Rational Function Fields 31
2.2.2 Ordered Fields 36
2.2.3 Rigid Elements 39
2.3 Dependent Valuations – Induced Topology 42
2.4 Approximation – Completion 48
2.5 Exercises 55

3 Extension of Valuations 57
3.1 Chevalley's Extension Theorem 57
3.2 Algebraic Extensions 60
3.3 The Fundamental Inequality 71
3.4 Transcendental Extensions 78
3.5 Exercises 82

4 Henselian Fields 85
4.1 Henselian Fields 86
4.2 p-Henselian Fields 93
4.3 Ordered Henselian Fields 99
4.4 The Canonical Henselian Valuation 103
4.5 Exercises 110

5 Structure Theory 113
5.1 Infinite Galois Groups 114
5.2 Unramified Extensions – First Exact Sequence 120
5.3 Ramified Extensions – Second Exact Sequence 126
5.4 Galois Characterization of Henselian Fields 136
5.5 Exercises 147

6 Applications of Valuation Theory 149
6.1 Artin's Conjecture 149
6.2 p-Adically Closed Fields 156
6.3 A Local-Global Principle for Quadratic Forms 163

A Ultraproducts of Valued Fields 173

B Classification of V-Topologies 187
