

Contents

Part I Introduction to Unconventional Superconductivity

1	A Brief Overview	3
	References	7
2	Basic Theoretical Concepts	11
	References	18

Part II Experimental Methods

3	Probing the Nodal Structure	21
	3.1 Specific Heat and Thermal Conductivity	21
	3.2 Magnetic Penetration Depth	23
	3.3 Ultrasound Attenuation	24
	References	26
4	Probing the Parity and Spin State	27
	4.1 H_{c2} Measurements	27
	4.2 Nuclear Magnetic Resonance and Knight Shift	28
	4.3 Muon Spin Rotation	30
	References	32
5	Probing the Energy Gap	35
	5.1 Planar Tunnelling Spectroscopy	35
	5.2 Scanning Tunnelling Spectroscopy (STS)	37
	5.3 Point-Contact Spectroscopy	39
	References	53
6	Probing the Phase	55
	6.1 Josephson Effect	55
	6.2 Zero-Bias Anomalies	59
	References	59

7	Probing the Vortices: Lattice Symmetry and Internal Structure	61
	7.1 Scanning Tunnelling Spectroscopy	62
	7.2 Small-Angle Neutron Scattering (SANS)	62
	7.3 Muon Spin Rotation	63
	References	63

Part III Possible Unconventional Superconductors

8	Ce-Based Heavy-Fermion Superconductors	67
	8.1 CeCu_2Si_2	67
	8.2 CeCoIn_5 and CeIrIn_5	72
	8.3 CePt_3Si	81
	References	84
9	U-Based Heavy-Fermion Superconductors	89
	9.1 UPt_3	89
	9.2 UBe_{13}	103
	9.3 URu_2Si_2	107
	9.4 UNi_2Al_3 and UPd_2Al_3	111
	References	115
10	Metal-Oxide Superconductors	121
	10.1 Sr_2RuO_4	122
	10.2 High-Temperature Superconductors	140
	References	147
A	Appendix	153
	References	161
	Index	169
