## Contents

<b>1</b>	<b>Basic Theories and Principles of Nonlinear Beam Deformations</b>	<b>1</b>
1.1	Introduction	1
1.2	Brief Historical Developments Regarding the Static and the Dynamic Analysis of Flexible members	1
1.3	The Euler–Bernoulli Law of Linear and Nonlinear Deformations for Structural Members	8
1.4	Integration of the Euler–Bernoulli Nonlinear Differential Equation	10
1.5	Simpson’s One-Third Rule	14
1.6	The Elastica Theory	16
1.7	Moment and Stiffness Dependence on the Geometry of the Deformation of Flexible Members	22
1.8	General Theory of the Equivalent Systems for Linear and Nonlinear Deformations	29
1.8.1	Nonlinear Theory of the Equivalent Systems: Derivation of Pseudolinear Equivalent Systems	30
1.8.2	Nonlinear Theory of the Equivalent Systems: Derivation of Simplified Nonlinear Equivalent Systems	40
1.8.3	Linear Theory of the Equivalent Systems	44
<b>2</b>	<b>Solution Methodologies for Uniform Flexible Beams</b>	<b>63</b>
2.1	Introduction	63
2.2	Pseudolinear Analysis for Uniform Flexible Cantilever Beams Loaded with Uniformly Distributed Loading Throughout their Length	64
2.3	Pseudolinear Analysis for Uniform Simply Supported Beams Loaded with a Uniformly Distributed Loading Throughout their Length	71
2.4	Flexible Uniform Simply Supported Beam Loaded with a Vertical Concentrated Load	76

2.5	Uniform Statically indeterminate Single Span Flexible Beam Loaded with a Uniformly Distributed Load $w_0$ on its Entire Span .....	82
2.6	Uniform Statically Indeterminate Single Span Flexible Beam Subjected to a Vertical Concentrated Load .....	86
2.7	Flexible Uniform Cantilever Beam Under Combined Loading Conditions.....	90
2.8	Flexible Uniform Cantilever Beam Under Complex Loading Conditions.....	96
2.8.1	Application of Equivalent Pseudolinear Systems .....	96
2.8.2	Deriving Simpler Nonlinear Equivalent Systems .....	101
<b>3</b>	<b>Solution Methodologies for Variable Stiffness Flexible Beams .....</b>	<b>105</b>
3.1	Introduction .....	105
3.2	Flexible Tapered Cantilever Beam with a Concentrated Vertical Load at its Free End .....	105
3.3	Doubly Tapered Flexible Cantilever Beam Subjected to a Uniformly Distributed Loading .....	113
3.4	Solution of the Problem in the Preceding Section by Using a Simplified Nonlinear Equivalent System.....	119
3.5	Flexible Tapered Simply Supported Beam with Uniform Load .....	121
3.6	Flexible Tapered Simply Supported Beam Carrying a Trapezoidal Load .....	125
3.7	Using an Alternate Approach to Derive a Simpler Equivalent Nonlinear System of Constant Stiffness .....	128
3.7.1	Application to Cantilever Flexible Beam Problems.....	129
3.7.2	Application to Flexible Simply Supported Beam Problems .....	133
<b>4</b>	<b>Inelastic Analysis of Structural Components .....</b>	<b>143</b>
4.1	Introduction .....	143
4.2	Theoretical Aspects of Inelastic Analysis .....	144
4.2.1	The Theory and Concept of the Reduced Modulus $E_r$ .....	144
4.2.2	Application of the Method of the Equivalent Systems for Inelastic Analysis .....	155
4.3	Inelastic Analysis of Simply Supported Beams.....	165
4.4	Ultimate Design Loads Using Inelastic Analysis .....	172
<b>5</b>	<b>Vibration Analysis of Flexible Structural Components .....</b>	<b>185</b>
5.1	Introduction .....	185
5.2	Nonlinear Differential Equations of Motion .....	186
5.2.1	The general Nonlinear Differential Equation of Motion .....	186
5.2.2	Small Amplitude Vibrations of Flexible Members .....	189

5.3	Application of the Theory and Method .....	193
5.3.1	Free Vibration of Uniform Flexible Cantilever Beams.....	193
5.3.2	Free Vibration of Flexible Simply supported Beams....	204
5.4	The Effect of Mass Position Change During the Vibration of Flexible Members .....	211
5.5	Galerkin's Finite Element Method (GFEM).....	213
5.6	Vibration of Tapered Flexible Simply Supported Beams Using Galerkin's FEM .....	221
5.7	Concluding Remarks .....	224
<b>6</b>	<b>Suspension Bridges, Failures, Plates, and Other Types of Nonlinear Structural Problems .....</b>	<b>229</b>
6.1	Introduction .....	229
6.2	Brief Discussion on Fundamental Aspects of Suspension Bridges .....	229
6.3	The Collapse of the Tacoma Narrows Suspension Bridge.....	232
6.4	Other Failures and What We Learn from Them .....	235
6.5	Eccentrically Loaded Columns .....	237
6.6	Inelastic Analysis of Members with Axial Restraints Using Equivalent Systems .....	240
6.7	The Longest Cable-Stayed Suspension Bridge in the World ...	253
6.8	Inelastic Analysis of Thin Rectangular Plates .....	259
6.9	Inelastic Earthquake Response of Multistory Buildings .....	269
6.9.1	Resistant R of a Structure .....	270
6.9.2	Multistory Buildings Subjected to Strong Earthquakes .....	276
6.10	Elastic and Inelastic Analysis of Thick-Walled Cylinders Subjected to Uniform External and Internal Pressures.....	285
6.10.1	Elastic Analysis of Thick Cylinders .....	285
6.10.2	Inelastic Analysis of Thick Cylinders.....	290
6.11	Inelastic Analysis of Members of Non-Rectangular Cross Sections .....	294
6.12	Torsion Beyond the Elastic Limit of the Material .....	297
6.13	Vibration Analysis of Inelastic Structural Members .....	299
6.14	Inelastic Analysis of Flexible Members .....	307
	<b>Appendix A Acceleration Impulse Extrapolation Method (AIEM) .....</b>	<b>323</b>
	<b>Appendix B Computer Program Using the AIEM for the Elastoplastic Analysis in Example 6.5 .....</b>	<b>327</b>
	<b>References .....</b>	<b>329</b>
