1	The Road to Hydrogenosomes	
	MIKLÓS MÜLLER	1
	1.1 Introduction	1
	1.2 The Story	2
	1.3 Conclusion	9
	References	10
2	Mitochondria: Key to Complexity	
	NICK LANE	13
	2.1 Introduction	13
	2.2 Size	15
	2.3 Compartments	16
	2.4 Dynamics of Gene Gain and Gene Loss in Bacteria	17
	2.5 ATP Regulation of Bacterial Replication	21
	2.6 Redox Poise Across Bioenergetic Membranes	25
	2.7 Allometric Scaling of Metabolic Rate and Complexity	29
	2.8 Conclusions	32
	References	33
3	Origin, Function, and Transmission of Mitochondria	
	CAROL A. ALLEN, MARK VAN DER GIEZEN, JOHN F. ALLEN	39
	3.1 Introduction	39
	3.2 Origins of Mitochondria	40
	3.3 Mitochondrial Genomes	43
	3.4 The Mitochondrial Theory of Ageing	45
	3.5 Why Are There Genes in Mitochondria?	47
	3.6 Co-location of Gene and Gene Product Permits Redox Regulation of Gene Expression	48
	3.7 Maternal Inheritance of Mitochondria	50
	3.8 Conclusions	53
	References	53
4	Mitochondria and Their Host: Morphology to Molecular Phylogeny	
	JAN SAPP	57
	4.1 Introduction	57
	4.2 Alternative Visions	57
	4.3 Before the Word	59

4.4	<i>Les Symbiotes</i>	60
4.5	Symbioticism and the Origin of Species	62
4.6	Against the Current	63
4.7	Infective Heredity	65
4.8	The Tipping Point	67
4.9	The Birth of Bacterial Phylogenetics	69
4.10	Just-So Stories	70
4.11	Kingdom Come, Kingdom Go	71
4.12	A Chimeric Paradigm	74
4.13	Recapitulation	77
	References	78
5	Anaerobic Mitochondria: Properties and Origins	
	ALOYSIUS G.M. TIELENS, JAAP J. VAN HELLEMOND	85
5.1	Introduction	85
5.2	Possible Variants in Anaerobic Metabolism	86
5.3	Cytosolic Adaptations to an Anaerobic Energy Metabolism	88
5.4	Anaerobically Functioning ATP-Generating Organelles	89
5.5	Energy Metabolism in Anaerobically Functioning Mitochondria	90
5.6	Adaptations in Electron-Transport Chains in Anaerobic Mitochondria	95
5.7	Structural Aspects of Anaerobically Functioning Electron-Transport Chains	96
5.8	Evolutionary Origin of Anaerobic Mitochondria	97
5.9	Conclusion	100
	References	100
6	Iron–Sulfur Proteins and Iron–Sulfur Cluster Assembly in Organisms with Hydrogenosomes and Mitosomes	
	JAN TACHEZY, PAVEL DOLEŽAL	105
6.1	Introduction	105
6.2	Mitochondrion-Related Organelles in “Amitochondriate” Eukaryotes	106
	6.2.1 Hydrogenosomes	107
	6.2.2 Mitosomes	108
6.3	Iron–Sulfur Cluster, an Ancient Indispensable Prosthetic Group	109
6.4	Iron–Sulfur Proteins in Mitochondria and Other Cell Compartments	109
6.5	Iron–Sulfur Proteins in Organisms Harboring Hydrogenosomes and Mitosomes	110
6.6	Iron–Sulfur Cluster Assembly Machineries	116
	6.6.1 Iron–Sulfur Cluster Assembly in <i>Saccharomyces cerevisiae</i> ...	116
	6.6.2 <i>Trichomonas vaginalis</i>	118
	6.6.3 <i>Giardia intestinalis</i>	120
	6.6.4 <i>Cryptosporidium parvum</i>	121
	6.6.5 Microsporidia	122
	6.6.6 <i>Entamoeba histolytica</i>	122

6.7	Iron–Sulfur Cluster Biosynthesis and the Evolution of Mitochondria	123
	References	127
7	Hydrogenosomes (and Related Organelles, Either) Are Not the Same	
	JOHANNES H.P. HACKSTEIN, JOACHIM TJADEN, WERNER KOOPMAN, MARTIJN HUYNEN	135
7.1	Introduction	135
7.2	Hydrogenosomes and Mitochondrial-Remnant Organelles Evolved Repeatedly: Evidence from ADP/ATP Carriers	139
7.3	Functional Differences Between Mitochondrial and Alternative ADP/ATP Transporters	142
7.4	Evolutionary Tinkering in the Evolution of Hydrogenosomes	144
7.4.1	Hydrogenosomes of <i>Trichomonas vaginalis</i>	144
7.4.2	Hydrogenosomes of Anaerobic Chytrids: an Alternative Way to Adapt to Anaerobic Environments	146
7.4.3	Hydrogenosomes of Anaerobic Ciliates: At Least One Appears to Be a Missing Link	149
7.5	Why an [Fe]-Only Hydrogenase?	152
7.6	Conclusions	153
	References	154
8	The Chimaeric Origin of Mitochondria: Photosynthetic Cell Enslavement, Gene-Transfer Pressure, and Compartmentation Efficiency
