List of Image Sets	XXI
Magnetic Resonance Imaging:	
A Historical Introduction	1
1. MRI and its Hardware	9
1.1 Introduction	9
1.1.1 Spin and Magnetization	9
1.1.2 Precession: Rotating System of Reference	10
1.1.3 Rotation: Excitation by RF Pulses	11
1.1.4 Excitation of a Selected Slice: Gradient Field	13
1.1.5 Free Induction Decay (FID)	15
1.2 Spin Echo	16
1.2.1 Determination of Position in the Read-Out Direction .	18
1.2.2 Determination of Position in the Phase-Encode Direction	19
1.2.3 Measuring Sequence	19
1.2.4 Object Slice: Voxels and Image Pixels	20
1.3 System Architecture	21
1.3.1 Magnets	25
1.3.1.1. Superconducting Magnets	27
1.3.1.2. Other Magnet Types	29
1.3.2 Deviations from the Homogeneous Magnetic Field	32
1.3.3 The Gradient Chain	35
1.3.3.1. Gradient Power Supply and Rise Time	38
1.3.3.2. Eddy Currents	39
1.3.4 The RF Chain	41
1.3.4.1. RF Coils	42
1.3.4.2. The Receiver	48
1.3.5 Physiological Signals	51
1.3.6 The Back End	53

2. Conventional Imaging Methods	55
2.1 Introduction	55
2.2 The Bloch Equation	55
2.2.1 Precession	58
2.3 Excitation	58
2.3.1 Non-selective Pulse	59
2.3.2 Slice-Selective RF Pulses	59
2.3.3 Other RF Pulses	62
2.3.4 Power Dissipation in an RF Pulse	63
2.4 The Spin-Echo Imaging Sequence	64
2.4.1 The \vec{k} Plane	68
2.4.1.1. Discrete Sampling	69
2.4.1.2. Sampling Point-Spread Function	72
2.4.1.3. Thinking in Terms of \vec{k} Space	72
2.4.2 Contrast in Spin-Echo Sequences	77
2.4.3 Scan Parameters and System Design	77
2.4.3.1. Practical Example	79
2.4.4 Multiple-Slice Acquisition	80
2.4.5 Imaging with Three-Dimensional Encoding	81
2.5 The Field-Echo Imaging Sequence	82
2.6 Artifacts	84
2.6.1 Ghosting	87
2.7 Magnetization Preparation	88
2.7.1 A T_1 Preparation Pulse: Inversion Recovery	89
2.7.2 Other Types of Magnetization Preparation	91
3. Imaging Methods with Advanced \vec{k}-Space Trajectories	133
3.1 Introduction	133
3.2 Turbo Spin Echo	135
3.2.1 Profile Order	137
3.2.2 Sources of Artifacts in TSE Images	139
3.3 Echo Planar Imaging	142
3.3.1 Practical Example	144
3.3.2 Artifacts Due to T_2^* Decay and Field Inhomogeneities	145
3.3.2.1. Artifacts Due to T_2^* Decay	146
3.3.2.2. Artifacts Due to Resonance Offset	148
3.3.2.3. Artifacts Due to Gradient Field Properties and Errors	149
3.4 Combination of TSE and EPI: GRASE	152
3.5 Square Spiral Imaging	154
3.6 Joyriding in \vec{k} Space	154
3.6.1 Spiral Imaging	156
3.6.1.1. A Practical Example	158
3.6.1.2. Reconstruction	159
3.6.1.3. Artifacts in Spiral Imaging	161

3.6.2	“Rosette” Trajectory	163
3.6.3	Radial Imaging	163
3.6.4	Some Remarks on the Reconstruction of Exotic Scans ..	164
3.7	Two-Dimensional Excitation Pulses	165
4.	Steady-State Gradient-Echo Imaging	191
4.1	Introduction	191
4.2	On FIDs and ECHOs	193
4.2.1	Spin Echo	195
4.2.2	“Eight-Ball” Echo	196
4.2.3	Stimulated Echo	197
4.2.4	RF Phase	199
4.2.5	Response to RF Pulses with $\alpha < 90^\circ$	200
4.2.6	Echos as Result of Many Excitations	201
4.2.7	ECHO Components and RF Phase Cycling	202
4.2.8	Suppressing the Spatial Variation of the Signal	205
4.2.9	Conclusions of the Qualitative Description	206
4.2.9.1.	N-FFE and T_2 -FFE	207
4.2.9.2.	T_1 -FFE	207
4.2.9.3.	R-FFE	207
4.3	Mathematical Model	208
4.3.1	Rotation and Precession Matrix	209
4.3.2	Relaxation Matrix	210
4.4	Steady State	210
4.5	Steady-State Gradient-Echo Methods (FE and FFE)	217
4.5.1	Sequences with Very Long TR	217
4.5.2	Sequences with $T_1 > TR > T_2$	218
4.5.3	Sequences with Small TR ($TR \cong T_2$)	218
4.5.3.1.	Large Net-Gradient Surface	218
4.5.3.2.	Rephased FFE	222
4.5.3.3.	FID Measurement with Spoiling of M_T^- : T_1 -FFE (FLASH)	224
4.5.4	FFE with Short TR in Steady State	226
4.5.4.1.	N-FFE, T_2 -FFE, and R-FFE with $TR \ll T_2$..	227
4.5.4.2.	T_1 -FFE with $TR \ll T_2$	229
4.5.5	Slice Profile	230
5.	Transient-State Gradient-Echo Imaging	243
5.1	Introduction	243
5.2	Signal Level During Transient State	245
5.2.1	Approach to Steady State by Assuming RF Spoiling ..	246
5.2.2	Approach to Steady State Without Spoiling	248
5.3	Magnetization Preparation	251
5.4	Profile Order	253
5.5	Survey of Transient Field Echo Methods	254

6. Contrast and Signal-to-Noise Ratio	263
6.1 Introduction	263
6.2 Contrast in MR Images	263
6.3 The Physical Mechanism of Relaxation in Tissue	265
6.3.1 The BPP Theory of Relaxation in Homogeneous Matter	266
6.3.2 Relaxation Effects in Tissue	268
6.3.2.1. Fast Exchange	268
6.3.2.2. Compartments and Slow Exchange	268
6.3.3 Magnetization Transfer	269
6.3.4 Contrast Agents	273
6.4 Signal-to-Noise Ratio (SNR)	275
6.4.1 Fundamental Expression for the SNR	276
6.4.2 Patient Loading of the Receiving Circuit	277
6.4.3 Low-Field and High-Field Systems	279
6.5 Practical Expression for the SNR	280
6.5.1 Introduction of the Scanning Parameters	281
6.5.2 Influence of the Receiver on the SNR	282
6.5.3 Influence of Relaxation on the SNR	283
6.6 Application to Practical Situations	284
6.7 SNR for Non-uniform Sampling of the k Plane	288
6.7.1 One-Sided Partial Scans	288
6.7.2 Non-uniform Sampling with Non-linear Trajectories ...	291
6.7.3 Reduced Matrix Acquisition	291
6.7.4 Other Partial-Scan Methods	292
7. Motion and Flow	311
7.1 Introduction	311
7.2 Moving Structures, Artifacts, and Imaging Methods	312
7.2.1 Cardiac Motion	312
7.2.2 Respiratory Motion	314
7.2.2.1. Ordering of Phase Encoding	314
7.2.2.2. Breath Hold	315
7.2.2.3. Respiratory Gating	315
7.2.2.4. Correction of Respiratory Movement Using Navigator Echoes	315
7.2.3 Tagging	317
7.3 Phase Shift Due to Flow in Gradient Fields	318
7.3.1 Velocity Measurement Using a Bipolar Gradient	320
7.3.2 Velocity-Insensitive Gradient Waveform	322
7.3.3 Flow with Acceleration	322
7.3.4 Influence of Field Inhomogeneities and Eddy Currents	324
7.4 Flow Artifacts	325
7.4.1 Ghosting Due to Pulsating Flow	325
7.4.2 Flow Voids	325

- 7.4.3 Shift in Phase-Encoding Direction Due to Flow 326
- 7.4.4 Velocity-Insensitive Imaging Sequences:
 - Flow Compensation 327
 - 7.4.4.1. Selection Direction 327
 - 7.4.4.2. Read-Out Direction 327
 - 7.4.4.3. Phase-Encoding Direction: Correction
for Misregistration 328
- 7.5 Flow Imaging 329
 - 7.5.1 Phase-Contrast Methods 330
 - 7.5.1.1. Phase-Contrast Angiography 331
 - 7.5.1.2. Quantitative Flow Based on Phase Contrast .. 331
 - 7.5.2 Modulus Contrast Methods 334
 - 7.5.2.1. Inflow Angiography 334
 - 7.5.2.2. Contrast-Enhanced MR Angiography 336
 - 7.5.2.3. MR Angiography Based
on Magnetization Preparation 339
 - 7.5.2.4. Black-Blood Angiography 344
 - 7.5.2.5. Artifacts in Modulus Contrast Angiography... 344
 - 7.5.2.6. Modulus-Contrast Quantitative
Flow Measurements 347
- 7.6 Perfusion 348
 - 7.6.1 MR Perfusion Imaging with Dynamic Bolus Studies .. 348
 - 7.6.2 Arterial Spin Labelling 351
- 7.7 Diffusion 354
 - 7.7.1 Measurement with Diffusion Sensitization
in One Direction 356
 - 7.7.2 Diffusion Imaging of the Brain 358
- 8. Partitioning of the Magnetization into Configurations 409**
 - 8.1 Introduction 409
 - 8.1.1 Configurations and Phase Diagrams 409
 - 8.2 Theory of Configurations 415
 - 8.2.1 Magnetization Expressed in Discrete Fourier Series ... 416
 - 8.2.2 Rotation 417
 - 8.2.3 Effect of Rotation and Precession
on the Configurations 420
 - 8.2.4 Use of the Theory of Configurations
to Describe the Examples in Sect. 8.1 422
 - 8.2.4.1. Multiple Spin-Echo Example 423
 - 8.2.4.2. Eight-Ball Echo
and Stimulated Echo Examples 425
 - 8.3 Multi-excitation Pulse Sequences 426
 - 8.3.1 SE-BURST Imaging 428
 - 8.3.1.1. Excitation Profile for BURST
with Single-Phase Excitation 431

8.3.1.2. Optimized BURST Excitation Using Phase Modulation	432
8.3.1.3. Combination of BURST with TSE	436
8.3.1.4. Gradient Recalled BURST Sequences	437
8.3.1.5. QUEST and PREVIEW	439
8.4 Theory of Configurations and Well-Known Fast-Imaging Se- quences	440
8.4.1 Application to TSE	440
8.4.2 Application to FFE	442
8.5 Rotation and Precession Matrices and RF Pulse Design	447
8.5.1 Shinnar–le Roux (SLR) Transformation	448
8.5.1.1. The Inverse Shinnar–Le Roux Transformation (ISLR Transformation)	450
Appendix	457
References	461
Index of Abbreviated Terms	475
Index	477
