Part I Synthetic Approaches to Nanomolecular Systems

1 Dynamic Redox Systems:

Towards the Realization of Unimolecular Memory

| | |
|-------------------------------------------------------------------------------------------------------------------|----|
| Takanori Suzuki, Hiroki Higuchi, Takashi Tsuji, Jun-ichi Nishida, Yoshiro Yamashita, Tsutomu Miyashi | 3 |
| 1.1 Introduction | 3 |
| 1.2 Redox Systems that Exhibit Drastic Geometrical Changes upon ET | 4 |
| 1.2.1 Folded–Planar Structural Change | 5 |
| 1.2.2 Planar–Twisted Structural Change | 5 |
| 1.2.3 Twisted–Twisted Structural Change | 7 |
| 1.2.4 Folded–Twisted Structural Change | 9 |
| 1.3 Redox Systems that Undergo | |
| Reversible Bond Making/Breaking upon ET | 11 |
| 1.3.1 Reversible Bond Making/Breaking | |
| Between Heteroatoms upon ET | 12 |
| 1.3.2 π -Electron Systems that Undergo C–C Bond Making | |
| upon Ionization | 12 |
| 1.3.3 π -Electron Systems that Undergo C–C Bond Breaking | |
| upon Ionization | 16 |
| 1.4 Toward the Realization of Unimolecular Memory | 19 |
| References | 20 |

2 Photoswitching of Intramolecular Magnetic Interaction Using Photochromic Compounds

| | |
|---------------------------------------------------|----|
| Kenji Matsuda, Masahiro Irie | 25 |
| 2.1 Introduction | 25 |
| 2.2 Photochromic Compounds | 26 |
| 2.3 Intramolecular Magnetic Interaction | 26 |
| 2.4 Photoswitching | |
| Using a Single Photochromic Molecule | 28 |
| 2.4.1 Molecular Design | 28 |
| 2.4.2 Switching of Magnetic Interaction | |
| Detected by Susceptibility Measurement | 30 |

| | | |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------|----|
| 2.4.3 | Switching of Magnetic Interaction Detected by ESR Spectra | 32 |
| 2.5 | Photoswitching Using an Array of Photochromic Molecules | 36 |
| 2.6 | Concluding Remarks | 39 |
| | Acknowledgments | 39 |
| | References | 39 |
| 3 | Single-Molecule Magnets | |
| | Keiji Takeda, Kunio Awaga | 41 |
| 3.1 | Single-Domain Magnets | 41 |
| 3.2 | Twelve-Nucleus Manganese Clusters | 43 |
| 3.3 | Thermal Relaxation in Mn_{12} | 45 |
| 3.4 | Jahn–Teller Isomers in Mn_{12} | 47 |
| | 3.4.1 Magnetic Properties of the Slower and Faster Molecules | 47 |
| | 3.4.2 Molecular Structure of the Slower and Faster Molecules | 49 |
| 3.5 | Quantum Relaxation in Mn_{12} | 51 |
| | 3.5.1 Quantum Relaxation of the Slower-Relaxation Molecule | 51 |
| | 3.5.2 Quantum Relaxation of the Faster-Relaxation Molecule | 52 |
| 3.6 | Quantum Computing with SMMs | 53 |
| 3.7 | Summary | 54 |
| | References | 55 |
| 4 | Atomic Resolution of Porphyrins: Single-Molecule Observations of Porphyrinoid Compounds by Scanning Tunneling Microscopy | |
| | Ken-ichi Sugiura, Hitoshi Miyasaka, Tomohiko Ishii, Masahiro Yamashita | 59 |
| 4.1 | Introduction | 59 |
| 4.2 | Why Porphyrins? | 59 |
| 4.3 | Phthalocyanines | 62 |
| | 4.3.1 Copper Phthalocyanine | 62 |
| | 4.3.2 Effect of Substrate | 62 |
| | 4.3.3 Effect of Incorporated Metals | 63 |
| | 4.3.4 Chemically Modified Phthalocyanines | 64 |
| 4.4 | Porphyryns | 65 |
| | 4.4.1 Tetraphenylporphyrins | 65 |
| | 4.4.2 Other Simple Porphyrins | 69 |
| | 4.4.3 Porphyrin Oligomers | 69 |
| | References | 70 |

Part II Surface Molecular Systems

5 Carboxylates Adsorbed on TiO₂(110)

| | |
|------------------------------------------------------------|----|
| Hiroshi Onishi | 75 |
| 5.1 Introduction | 75 |
| 5.2 Rutile TiO ₂ (110), the Substrate | 76 |
| 5.3 Formate on TiO ₂ (110) | 78 |
| 5.4 Other Carboxylates | 82 |
| 5.5 Carboxylate Monolayers of Mixed Composition | 84 |
| 5.6 Prospects | 85 |
| Acknowledgments | 86 |
| References | 86 |

6 Self-Assembled Monolayers for Molecular Nanoelectronics

| | |
|--------------------------------------------------------------------|-----|
| Takao Ishida | 91 |
| 6.1 Introduction | 91 |
| 6.2 Basic Properties of Organosulfur SAMs on Au Surfaces | 92 |
| 6.3 STM Observation of Organosulfur SAMs | 94 |
| 6.4 Nanostructure Formation Using SAMs | 98 |
| 6.5 Electrical-Conduction Measurements of SAMs | 99 |
| 6.6 Stability of SAMs | 102 |
| 6.7 Conclusions and Future Expectations | 103 |
| Acknowledgments | 103 |
| References | 104 |

7 Supramolecular Chemistry on Solid Surfaces

| | |
|----------------------------------------------------------------------|-----|
| Takuya Matsumoto, Tomoji Kawai, Takashi Yokoyama | 107 |
| 7.1 Supramolecular Assembly in Molecular-Scale Electronics | 107 |
| 7.2 Supramolecular Approach | 108 |
| 7.3 Dipole–Dipole Interactions | 109 |
| 7.4 Hydrogen Bonds | 114 |
| 7.5 π -Stacking Interactions | 115 |
| 7.6 Concluding Remarks | 120 |
| References | 121 |

8 Semiconductor and Molecular-Assembly Nanowires

| | |
|-----------------------------------------------------|-----|
| Tomoyuki Akutagawa, Takayoshi Nakamura | 123 |
| 8.1 Introduction | 123 |
| 8.2 Semiconductor Nanowires | 126 |
| 8.2.1 Preparation and Assembly | 127 |
| 8.2.2 Electrical Properties | 132 |
| 8.2.3 p - n Junctions and FET Devices | 134 |

| | |
|---------------------------------------------|-----|
| 8.3 Nanowires of Molecular Assemblies..... | 136 |
| 8.3.1 Molecular Conductors..... | 138 |
| 8.3.2 TTF-Br Nanocrystals..... | 139 |
| 8.3.3 Crown-Ether-Fused Phthalocyanine..... | 140 |
| 8.3.4 TTF Macrocycle..... | 142 |
| 8.4 Summary..... | 143 |
| References..... | 144 |

9 Control of Dye Aggregates in Microscopic Polymer Matrices

| | |
|---------------------------------------------------------|-----|
| Olaf Karthaus..... | 149 |
| 9.1 Cyanine Dyes..... | 149 |
| 9.2 Dewetting-Assisted Polymer Microdome Formation..... | 151 |
| 9.3 Results..... | 151 |
| 9.3.1 Microscopy of Polystyrene Matrices..... | 151 |
| 9.3.2 Spectroscopy..... | 154 |
| 9.3.3 Microscopy of Liquid Crystalline Matrices..... | 158 |
| 9.4 Outlook..... | 160 |
| References..... | 160 |

Part III Theory of Nanomolecular Systems

10 Theoretical Calculations of Electrical Properties of Nanoscale Systems Under the Influence of Electric Fields and Currents

| | |
|------------------------------------------------------------------------------------------------------------|-----|
| Satoshi Watanabe..... | 165 |
| 10.1 Problems of Conventional Methods..... | 165 |
| 10.2 Methods to Treat Nanomolecular Systems Under the Influence of Electric Fields and Currents..... | 167 |
| 10.2.1 Method for Cases Without Electric Currents..... | 167 |
| 10.2.2 Methods for Cases with Electric Currents..... | 169 |
| 10.3 Applications to Simple Nanoscale Systems..... | 172 |
| 10.3.1 Field Emission from Metal Surfaces..... | 172 |
| 10.3.2 Atomic Wires Between Metal Electrodes..... | 174 |
| 10.4 Approaches to Nanomolecular Systems..... | 177 |
| 10.4.1 Empirical Approaches..... | 177 |
| 10.4.2 Self-Consistent Approaches..... | 178 |
| 10.5 Concluding Remarks..... | 179 |
| Acknowledgments..... | 180 |
| References..... | 180 |

11 Nanodevices for Quantum Computing Using Photons
 Shigeki Takeuchi 183

11.1 Quantum Communication and Quantum Information Processing .. 183

11.2 Quantum Cryptography 184

 11.2.1 The Mechanism of Quantum Cryptography 184

 11.2.2 Devices for Quantum Cryptography 187

11.3 Quantum Computation 187

 11.3.1 The Mechanism of Quantum Computation..... 187

 11.3.2 Towards the Realization of Quantum Computers 189

 11.3.3 A Hard Bottleneck: Decoherence 189

11.4 Nanodevices for Quantum Computing Using Photons..... 190

 11.4.1 Single-Photon Sources 190

 11.4.2 Photonic Quantum Phase Gates..... 191

11.5 Conclusion 192

Acknowledgments 192

References 192
