1	Introduction to Meiobenthology	1
1.1	Meiobenthos and Meiofauna: Definitions	1
1.2	A History of Meiobenthology	2
2	The Biotope: Factors and Study Methods	7
2.1	Abiotic Factors (Sediment Physiography)	7
2.1.1	Sediment Pores and Particles	7
2.1.2	Granulometric Characteristics	9
2.1.3	The Sediment–Water Regime	14
2.1.4	Physicochemical Characteristics	22
2.2	Biotic Habitat Factors: A Connected Complex	37
2.2.1	Detritus and Particulate Organic Matter (POM)	38
2.2.2	Dissolved Organic Matter (DOM)	40
2.2.3	Mucus, Exopolymers, and Biofilms	41
2.2.4	Bacteria	43
2.2.5	Microphytobenthos	48
2.2.6	Higher Plants	53
2.2.7	Animals Structuring the Ecosystem	53
2.3	Conclusion: The Microtexture of Natural Sediments	59
3	Sampling and Processing Meiofauna	63
3.1	Sampling	63
3.1.1	Number of Replicates and Size of Sampling Units	63
3.1.2	Sampling Devices	64
3.2	Processing of Meiofaunal Samples	72
3.2.1	Preserving Meiofauna in Their Natural Void System	72
3.2.2	Extraction of Meiofauna	73
3.2.3	Fixation and Preservation	77
3.2.4	Processing and Identifying Meiofaunal Organisms	80
3.3	Extraction of Pore Water	84

4	Biological Characteristics of Meiofauna	87
4.1	Adaptations to the Biotope	87
4.1.1	Adaptations to Narrow Spaces: Miniaturization, Elongation, Flexibility	87
4.1.2	Adaptations to the Mobile Environment: Adhesion, Special Locomotion, Reinforcing Structures	92
4.1.3	Adaptations to the Three-Dimensional Dark Environment: Static Organs, Reduction of Pigment and Eyes	97
4.1.4	Adaptations Related to Reproduction and Development	99
5	Meiofauna Taxa: A Systematic Account	103
5.1	Protista (Protoctista)	103
5.1.1	Foraminifera (Rhizaria: Granuloreticulosa)	103
5.1.2	Heliozoa (Actinopodia).	107
5.1.3	Amoebozoa (“Rhizopoda”): Gymnamoebae, Testacea.	107
5.1.4	Ciliophora (Ciliata).	108
5.2	Cnidaria.	114
5.2.1	Hydrozoa (Medusae).	116
5.2.2	Hydrozoa (Polyps).	116
5.2.3	Scyphozoa.	118
5.2.4	Anthozoa.	118
5.3	Free-Living Platyhelminthes: Turbellarians	119
5.3.1	Major Turbellarian Groups	120
5.3.2	Distributional and Ecological Aspects	123
5.4	Gnathifera	127
5.4.1	Gnathostomulida.	127
5.4.2	Rotifera, Rotatoria	129
5.4.3	Micrognathozoa	133
5.5	Nemertinea	134
5.6	Nemathelminthes: A Valid Taxon?	136
5.6.1	Nematoda (Free-Living).	137
5.6.2	Kinorhyncha	156
5.6.3	Priapulida	158
5.6.4	Loricifera	160
5.6.5	Gastrotricha.	162
5.7	Tardigrada	165
5.8	Crustacea.	171
5.8.1	Cephalocarida	172
5.8.2	Anostraca: Anomopoda (“Cladocera”; “Branchiopoda”).	173
5.8.3	Ostracoda	175

5.8.4	Mystacocarida	180
5.8.5	Copepoda: Harpacticoida	181
5.8.6	Copepoda: Cyclopoida and Siphonostomatoida	189
5.8.7	Malacostraca	190
5.9	Chelicerata: Acari	201
5.9.1	Halacaroida: Halacaridae	201
5.9.2	Freshwater Mites: “Hydrachnidia,” Stygothrombiidae, and Others	205
5.9.3	Palpigradi (Arachnida)	205
5.9.4	Pycnogonida, Pantopoda	206
5.10	Terrigenous Arthropoda (Thalassobionts)	207
5.11	Annelida	207
5.11.1	Polychaeta	208
5.11.2	Oligochaeta	215
5.11.3	Annelida “Incertae sedis”	218
5.12	Sipuncula	221
5.13	Mollusca	223
5.13.1	Monoplacophora and Aplacophora	223
5.13.2	Gastropoda	225
5.14	Tentaculata	226
5.14.1	Brachiopoda	226
5.14.2	Bryozoa, Ectoprocta	227
5.15	Kamptozoa, Entoprocta	228
5.16	Echinodermata	229
5.16.1	Holothuroidea	229
5.17	Chaetognatha	230
5.18	Tunicata (Chordata)	231
5.18.1	Asciacea	231
5.18.2	Sorberacea	232
5.19	Meiofaunal Taxa: Concluding Remarks	233
6	Evolutionary and Phylogenetic Effects in Meiobenthology	235
6.1	Body Structures of Evolutionary Relevance	235
6.2	Meiofauna in the Fossil Record	239
7	Patterns of Meiofauna Distribution	243
7.1	Evolutionary Aspects	243
7.2	Zoogeographic Aspects	249
7.2.1	Mechanisms of Dispersal	250
7.2.2	Geological Structures and Processes	256
7.3	Ecological Aspects of Distributional Importance: Horizontal Patterns	259
7.4	Vertical Zonation of Meiobenthos	261

8	Meiofauna from Selected Biotopes and Regions	267
8.1	Polar Regions	268
8.1.1	Sea Ice	270
8.2	Marine Subtropical and Tropical Regions	276
8.2.1	Tropical Sands	278
8.2.2	Mangroves	280
8.3	The Deep-Sea	284
8.3.1	The Habitat	284
8.3.2	The Meiofauna	287
8.4	Dysoxic, Anoxic, and Sulfidic Environments: Discussing the Thiobios	296
8.4.1	Reducing Habitats of the Thiobios	296
8.4.2	Thiobiotic Meiobenthos	298
8.4.3	Survival of Thiobios Under Anoxia and Sulphide – Mechanisms and Adaptations	302
8.4.4	Food Spectrum of the Thiobios	307
8.4.5	Distribution and Succession of the Thiobios	308
8.4.6	Diversity and Evolution of the Thiobios	309
8.4.7	Chemoautotrophy-Based Ecosystems: Vents, Seeps, and Other Exotic Habitats	313
8.5	Phytoplankton Habitats and Hard Substrates	317
8.6	Brackish Water Sites	324
8.7	Freshwater Biotopes	328
8.7.1	Running Waters: Stream and River Beds	329
8.7.2	The Groundwater System	338
8.7.3	Standing Waters, Lakes	344
8.8	Polluted Habitats	349
8.8.1	General Aspects and Method Survey	349
8.8.2	Selected Cases of Pollution and Meiofauna	361
9	Synecological Perspectives in Meiobenthology	373
9.1	Community Structure and Diversity	373
9.1.1	Processes of Recolonization	375
9.2	Community Structure and Size Spectra	377
9.3	The Meiobenthos in the Benthic Energy Flow	383
9.3.1	General Considerations	383
9.3.2	Assessing Production: Abundance, Biomass, P/B Ratio, Respiration	387
9.3.3	The Energetic Divergence Between Meiofauna and Macrofauna	397
9.4	The Position of Meiofauna in the Benthic Ecosystem: A Compilation of Energy Fluxes	400
9.4.1	The Meiofauna as Members of the “Small Food Web”	402
9.4.2	Links Between the Meiofauna and the Macrofauna	406
9.4.3	Meiofauna as an Integrative Benthic Complex	410
