
Contents

- 1 Introduction** 1
 - 1.1 Survey of Agent–Environment Interactions 1
 - 1.2 Aims and Objectives 8
 - 1.3 Organization of the Book 11

- 2 Biologically Inspired Perception–Action Systems** 13
 - 2.1 Senses and Behavior of Animals 13
 - 2.1.1 Obstacle Avoidance Behavior 15
 - 2.1.2 Prey Capture Behavior 19
 - 2.2 Morphologies of Walking Animals 22
 - 2.2.1 A Salamander 23
 - 2.2.2 A Cockroach 24
 - 2.3 Locomotion Control of Walking Animals 26
 - 2.4 Conclusion 29

- 3 Neural Concepts and Modeling** 31
 - 3.1 Neural Networks 31
 - 3.1.1 A Biological Neuron 32
 - 3.1.2 An Artificial Neuron 33
 - 3.1.3 Models of Artificial Neural Networks 36
 - 3.2 Discrete Dynamics of the Single Neuron 37
 - 3.3 Evolutionary Algorithm 41
 - 3.4 Conclusion 45

- 4 Physical Sensors and Walking Machine Platforms** 47
 - 4.1 Physical Sensors 47
 - 4.1.1 An Artificial Auditory–Tactile Sensor 47
 - 4.1.2 A Stereo Auditory Sensor 49
 - 4.1.3 Antenna-like Sensors 51
 - 4.2 Walking Machine Platforms 55
 - 4.2.1 The Four-Legged Walking Machine AMOS-WD02 57

4.2.2	The Six-Legged Walking Machine AMOS-WD06	61
4.3	Conclusion	64
5	Artificial Perception–Action Systems	67
5.1	Neural Preprocessing of Sensory Signals	67
5.1.1	Auditory Signal Processing	68
5.1.2	Preprocessing of a Tactile Signal	82
5.1.3	Preprocessing of Antenna-like Sensor Data	87
5.2	Neural Control of Walking Machines	89
5.2.1	The Neural Oscillator Network	89
5.2.2	The Velocity Regulating Network	94
5.2.3	The Modular Neural Controller	98
5.3	Behavior Control	99
5.3.1	The Obstacle Avoidance Controller	99
5.3.2	The Sound Tropism Controller	103
5.3.3	The Behavior Fusion Controller	104
5.4	Conclusion	111
6	Performance of Artificial Perception–Action Systems	113
6.1	Testing the Neural Preprocessing	113
6.1.1	The Artificial Auditory–Tactile Sensor Data	113
6.1.2	The Stereo Auditory Sensor Data	118
6.1.3	The Antenna-like Sensor Data	123
6.2	Implementation on the Walking Machines	126
6.2.1	Obstacle Avoidance Behavior	128
6.2.2	Sound Tropism	135
6.2.3	Behavior Fusion	142
6.3	Conclusion	145
7	Conclusions	147
7.1	Summary of Contributions	147
7.2	Possible Future Work	149
A	Description of the Reactive Walking Machines	151
A.1	The AMOS-WD02	151
A.2	The AMOS-WD06	152
A.3	Mechanical Drawings of Servomotor Modules and the Walking Machines	154
B	Symbols and Acronyms	165
	References	167
	Index	183
