List of Acronyms and Symbols.....	XVII
-----------------------------------	------

Part I Introduction

1 Fundamentals of Organic Film Growth and Characterisation

H. Sitter, R. Resel, G. Koller, M.G. Ramsey,

<i>A. Andreev, and C. Teichert.....</i>	3
1.1 General.....	3
1.2 Nucleation Process and Growth Modes	4
1.3 The Surface Science Approach	7
1.3.1 In Situ UHV MBE	8
1.3.2 Valence Band Photoemission (ARUPS).....	9
1.3.3 Near Edge X-Ray Absorption Fine Structure Spectroscopy (NEXAFS).....	12
1.3.4 Scanning Tunnelling Microscopy	14
1.4 Crystallographic Characterisation	15
1.5 Fundamentals of Atomic Force Microscopy	16
References	18

2 Optical Characterization Methods for Ultrathin Nanoaggregates

<i>H.-G. Rubahn</i>	21
2.1 Dark Field and Fluorescence Microscopy	21
2.2 Two-Photon Microscopy	22
2.3 Scanning Near-Field Optical Microscopy	24
2.4 Two-Photon Near-Field Microscopy	25
References	28

Part II Growth

**3 Growth of Oriented Organic Nanoaggregates
via Molecular Beam Deposition**

<i>F. Balzer</i>	31
3.1 Introduction	31
3.2 Adsorbates	32
3.3 Silicate Substrates	34
3.4 Phenylenes on Muscovite	36
3.4.1 <i>Para</i> -Hexaphenylene	36
3.4.2 Steps and Defects	43
3.4.3 Kinetics	45
3.4.4 Growth Model	51
3.5 Thiophenes on Muscovite	53
3.6 Microrings	56
3.7 Au–Mica Heterostructures	58
3.8 Conclusions	60
References	62

**4 Tailored Organic Nanoaggregates Generated
by Self-Assembly of Designed Functionalised
p-Quaterphenylenes on Muscovite Mica Substrates**

<i>K. Al-Shamery, M. Schiek, R. Koch, and A. Lützen</i>	67
4.1 Introduction	67
4.2 Design	68
4.3 Synthesis of Oligomers	70
4.4 Vapour Deposition Studies	72
4.5 Nanoaggregates from Symmetrically Functionalised Oligomers	73
4.6 Nanoaggregates from Non-Symmetrically Functionalised Oligomers	78
4.7 Non-Linear Optical Properties	80
4.8 Quantum Chemical Calculations and Optical Properties	82
4.9 Conclusion	83
References	84

**5 Hot-Wall Epitaxial Growth of Films
of Conjugated Molecules**

<i>H. Sitter</i>	89
5.1 Introduction: Why Highly Ordered Organic Thin Films?	89
5.2 Experimental Setup	90
5.2.1 Hot-Wall Epitaxy	90
5.2.2 Source Materials and Substrates	93
5.2.3 Characterization Methods	94
5.3 Pristine and Ba-Doped C ₆₀ Layers	95
5.3.1 C ₆₀ Films on Mica Substrates	95

5.3.2	Doping of C ₆₀ with Ba	98
5.4	Highly Ordered Films of <i>Para</i> -Sexiphenyl	100
5.4.1	Needles and Islands of p-6P on KCl Substrates	102
5.4.2	Islands and Nanofibers of p-6P on Mica Substrates	106
5.5	Conclusion	114
	References	116

6 Crystallography of Ultrathin Organic Films and Nanoaggregates

	<i>T. Haber and R. Resel</i>	119
6.1	Overview	120
6.2	Crystal Structure of Rodlike Conjugated Molecules	122
6.2.1	Oligoacenes	124
6.2.2	Oligophenylenes	124
6.2.3	Oligothiophenes	125
6.3	Experimental Methods	126
6.3.1	Fundamentals	126
6.3.2	Specular Scans	127
6.3.3	Rocking Curves	128
6.3.4	Pole Figure Technique	130
6.3.5	Surface Diffraction	131
6.3.6	Line Profile Analysis	132
6.3.7	Transmission Electron Microscopy	134
6.4	Crystallographic Order within Nanoaggregates	137
6.4.1	Out-of-Plane Order	138
6.4.2	In-Plane Order (Organic Epitaxy)	140
6.4.3	Relation Between Crystal Structure and Film Morphology	145
6.4.4	Crystallite Size	148
6.4.5	Polymorphism	152
6.5	Early Stage Growth	153
6.6	Conclusion	158
	References	159

7 Growth and Electronic Structure of Homo- and Hetero-epitaxial Organic Nanostructures

	<i>G. Koller and M.G. Ramsey</i>	165
7.1	Introduction	165
7.2	Organic Films on Inorganic Substrates	166
7.2.1	The Substrate as a Template	167
7.2.2	Structure and Morphology Determinants: Sticking vs. Diffusion Anisotropy	171
7.2.3	The Electronic Structure	178
7.2.4	The Electronic Band Alignment on Nanostructured Interfaces	182

7.3	Organic–Organic Heteroepitaxy	185
7.3.1	Growth on Closed –CH-terminated Organic Surfaces	186
7.3.2	Growth on Open π -terminated Organic Surfaces	187
7.4	Outlook	191
	References	191

8 Mechanisms Governing the Growth of Organic Oligophenylene “Needles” on Au Substrates

	<i>K. Hänel and C. Wöll</i>	195
8.1	Introduction	195
8.2	Experimental	197
8.3	The Importance of Molecular Conformations in P4P	198
8.4	Molecular Orientation and Conformation within Ultrathin P4P Films Grown on Gold Substrates: Studies using Soft X-ray Absorption Spectroscopy	198
8.4.1	Ultrathin Layer Containing only the α -Species	199
8.4.2	Full Monolayer Containing α - and β -Species	202
8.4.3	Multilayers	202
8.5	The Orientation of Organic Oligophenylene “Needles” on Gold Substrates	203
8.6	Manipulation of Organic Needles Using an STM Operated under SEM Control	206
8.6.1	STM Studies of P4P Needles	207
8.6.2	Manipulation of STM Needles	211
8.6.3	STM Investigations of the Former Contact Area	214
	References	215

Part III Optics

9 Nanooptics Using Organic Nanofibers

	<i>K. Thilsing-Hansen, S.I. Bozhevolnyi, and H.-G. Rubahn</i>	219
9.1	Morphology and Optical Response	219
9.1.1	Static Response	219
9.1.2	Dynamic Response	220
9.2	Guiding of Electromagnetic Waves	225
9.3	Spatial Distribution of Molecular Emitters	228
9.4	The Optical Near Field of Nanofibers	231
9.4.1	Single Photon Tunneling Microscopy	231
9.4.2	Two-photon Near Field Microscopy	234
9.5	Conclusions	236
	References	237

10 Optical Gain and Random Lasing in Self-Assembled Organic Nanofibers

<i>F. Quochi, F. Cordella, A. Mura, and G. Bongiovanni</i>	239
10.1 Introduction	239
10.2 Overview on Random Lasing	240
10.3 Experimental Techniques	241
10.4 Random Lasing and Amplified Spontaneous Emission in Close-Packed Organic Nanofibers	242
10.5 Optical Amplification and Random Laser Action in Single Organic Nanofibers	247
10.5.1 Coherent Random Lasing in Single Nanofibers	247
10.5.2 Optical Amplification in Single Nanofibers	252
10.6 Potential Applications of Self-assembled Organic Nanofibers	255
10.7 Summary and Conclusions	257
References	258

Part IV Applications

11 Fabrication and Characterization of Self-Organized Nanostructured Organic Thin Films and Devices

<i>A. Andreev, C. Teichert, B. Singh, and N.S. Sariciftci</i>	263
11.1 Introduction	263
11.2 Experimental Methods	265
11.2.1 Organic Materials and Growth Techniques	265
11.2.2 OFET: Device Fabrication	266
11.2.3 Electrical Characterization Using an OFET (Operating Principle)	267
11.2.4 Morphological Characterization of Organic Thin Films and Devices	270
11.2.5 Optical and Structural Characterization of Organic Thin Films and Devices	270
11.3 Anisotropy of Self-Organized Organic Thin Films	271
11.3.1 Anisotropic Epitaxial Growth of p-6P on Mica(001)	271
11.3.2 Anisotropic Epitaxial Growth of p-6P on KCl(001)	277
11.3.3 Anisotropic Epitaxial Growth of p-6P and p-4P on TiO ₂ and Metal Surfaces	282
11.4 Luminescent and Lasing Properties of Anisotropic Organic Thin Films	285
11.5 Devices Based on Organic Thin Films	288
11.5.1 OFETs Based on C ₆₀ Thin Films Grown by HWE	288
11.5.2 Anisotropic Current–Voltage Characteristics of p-6P Chains on Mica	292
11.6 Conclusions	295
References	296

12 Device-Oriented Studies on Electrical, Optical and Mechanical Properties of Individual Organic Nanofibers <i>J. Kjelstrup-Hansen, P. Bøggild, H.H. Henrichsen, J. Brewer, and H.-G. Rubahn</i>	301
12.1 Introduction.....	301
12.2 Toward Photonic Devices: The Optical Properties of Isolated Nanofibers	303
12.2.1 Preparation and Optical Detection	303
12.2.2 Nanofiber Tomography and Angular Light Emission	304
12.3 Studies on Electrical Properties	309
12.3.1 Charge Injection and Transport	309
12.3.2 Experiments on Single-Nanofiber Devices	311
12.4 Nanofiber Mechanics	315
12.4.1 2-D Manipulation	316
12.4.2 3-D Manipulation	320
12.5 Conclusions	322
References	323
13 Device Treatment of Organic Nanofibers: Embedding, Detaching, and Cutting <i>H. Sturm and H.-G. Rubahn</i>	325
13.1 Introduction.....	325
13.2 Coating of Organic Nanofibers on Mica	327
13.2.1 Parameters Related to the Embedding of Organic Nanofibers: Thermal Conductivity and Thermal Expansion.....	327
13.2.2 Evaporation of Silicon Oxide.....	329
13.2.3 Antibleaching Effect with SiO _x Coatings	330
13.2.4 Microscopical Analysis of Nanofibers on Mica, Covered by SiO _x	330
13.3 Parameters Related to the Embedding of Organic Nanofibers: Preparation of Polymer Films	338
13.3.1 Motivation for Encapsulation of Nanofibers in Polymers	338
13.3.2 Essential and Desirable Polymer Properties, Preparation Strategies	340
13.4 Cutting of Nanofibers	342
13.5 Conclusions	345
References	346
Index	347
