## Contents

<b>1</b>	<b>Introduction</b> .....	1
1.1	Irregular Wavelet and Gabor Frames .....	1
1.2	Density for Gabor Systems .....	3
1.3	Geometry of Time-Scale Indices .....	5
1.4	Overview of Main Results .....	7
<b>2</b>	<b>Wavelet and Gabor Frames</b> .....	11
2.1	Frame Theory .....	11
2.2	Wavelet Analysis .....	13
2.3	Time-Frequency Analysis .....	16
2.4	Amalgam Spaces .....	19
<b>3</b>	<b>Weighted Affine Density</b> .....	21
3.1	Definitions .....	21
3.2	Basic Properties .....	24
3.3	The Notion of Affine Density by Sun and Zhou .....	27
3.4	Comparison of Both Notions of Affine Density .....	32
<b>4</b>	<b>Qualitative Density Conditions</b> .....	35
4.1	Existence of an Upper Frame Bound .....	35
4.2	Existence of a Lower Frame Bound .....	37
4.3	Examples of Wavelet Systems .....	42
4.4	Density of Sequences in $\mathbb{R}^+$ .....	45
4.5	Affine Density and the Local Integrability Condition .....	48
4.5.1	Amalgam Spaces on $\mathbb{R} \setminus \{0\}$ .....	48
4.5.2	A Density Version of the Local Integrability Condition ..	50
4.5.3	A Characterization of Wavelet Parseval Frames .....	56
<b>5</b>	<b>Quantitative Density Conditions</b> .....	59
5.1	Outline and Comparison with Previous Work .....	59
5.2	Density of Product Sequences .....	61

5.3	A Fundamental Relationship . . . . .	63
5.4	The Nyquist Phenomenon . . . . .	75
5.5	Sufficient Density Conditions for Wavelet Frames . . . . .	76
5.6	Existence of Special Weight Functions . . . . .	81
5.7	Co-Affine Systems . . . . .	82
<b>6</b>	<b>Homogeneous Approximation Property . . . . .</b>	<b>87</b>
6.1	Amalgam Spaces and the Continuous Wavelet Transform . . . . .	87
6.2	The Basic Class $\mathcal{B}_0$ . . . . .	89
6.3	The Homogeneous Approximation Property for Wavelet Frames . . . . .	93
6.4	The Comparison Theorem for Wavelet Frames . . . . .	97
6.5	Density Results for Wavelet Schauder Bases . . . . .	100
<b>7</b>	<b>Weighted Beurling Density and Shift-Invariant Gabor Systems . . . . .</b>	<b>105</b>
7.1	Motivation and Outline of Chapter . . . . .	105
7.2	Weighted Beurling Density . . . . .	107
7.3	Littlewood–Paley Type Inequalities . . . . .	110
7.4	Equivalent Definition of Weighted Beurling Density . . . . .	115
7.5	Beurling Density, Frame Bounds, and Gabor Generators . . . . .	119
7.6	Shift-Invariant Gabor Systems . . . . .	121
	<b>References . . . . .</b>	<b>127</b>
	<b>Index . . . . .</b>	<b>135</b>
