<b>1 Salmonids</b>	
C. Araneda, R. Neira, N. Lam, P. Iturra .....	1
1.1 Introduction .....	1
1.2 History of Salmon Culture .....	1
1.2.1 Early History of Salmon Culture .....	1
1.2.2 From 1890 to 1975 .....	2
1.2.3 From 1975 to the Present Time .....	2
1.3 Taxonomic Status and Distribution .....	2
1.3.1 Genus <i>Salmo</i> .....	4
1.3.2 Genus <i>Oncorhynchus</i> .....	4
1.3.3 Genus <i>Salvelinus</i> .....	6
1.3.4 Genus <i>Coregonus</i> .....	6
1.3.5 Genus <i>Hucho</i> .....	6
1.4 Genetic Improvement .....	6
1.4.1 Genetic Improvement Programs in Salmon Aquaculture .....	7
1.5 Genetic Mapping in Salmonids .....	7
1.5.1 First Generation Map .....	9
1.5.2 Second Generation Map .....	18
1.5.3 Mapping Consequences of Ancestral Tetraploidy of Salmonids .....	19
1.6 Detection of Quantitative Trait Loci .....	20
1.6.1 Upper Temperature Tolerance .....	20
1.6.2 Spawning Date .....	22
1.6.3 Embryonic Development Rate .....	23
1.6.4 Morphological and Meristic Traits .....	24
1.6.5 Resistance to Disease and Immunologic Traits .....	26
1.7 Association of Traits with Specific Molecular Markers .....	29
1.7.1 Bulked Segregant Analysis .....	29
1.7.2 Selective Genotyping .....	31
1.7.3 Other Single Locus Markers .....	31
1.8 Physical Mapping .....	32
1.8.1 Karyotypes .....	32
1.8.2 Physical Mapping of Centromeric Repeats .....	33
1.8.3 Physical Mapping of Telomeric Repeated Sequences .....	34
1.8.4 Physical Mapping of Multicopy Genes: Ribosomal Genes .....	34
1.8.5 Physical Mapping of Coding Genes .....	35
1.8.6 Physical Mapping of Sex Markers .....	36
1.9 Integration of Genetic and Cytogenetic Maps .....	37
References .....	37

**2 Cyprinids**

L. Orban, Q. Wu	45
2.1 Introduction	45
2.2 The Biology and History of Farmed Cyprinids	45
2.2.1 The Taxonomy and Physiology of Farmed Cyprinids	45
2.2.2 Classical Studies on the Taxonomy and Origin of Farmed Cyprinids	46
2.2.3 The History of Cyprinid Aquaculture	47
2.3 Classical Genetics	49
2.3.1 Phenotypic Markers	49
2.3.2 Biochemical Markers	49
2.4 Cyprinid Chromosome Sets and Their Manipulation	50
2.4.1 Chromosome Sets	50
2.4.2 Gynogenesis	51
2.4.3 Androgenesis	52
2.4.4 Induced Triploidy	53
2.4.5 Induced Tetraploidy	54
2.4.6 Nuclear Transfer	56
2.5 Genetic and Genomic Resources for Cyprinid Research	56
2.5.1 DNA Markers and Their Applications	56
2.5.2 Genetic Maps, Map-Based Cloning, and QTLs	61
2.5.3 Libraries, cDNAs and Proteins	63
2.5.4 The Zebrafish Genome Project	64
2.5.5 cDNA Arrays and Oligonucleotide Chips	64
2.5.6 Induced Mutants and Transgenic Lines	66
2.6 Speculation on Sequencing the Genome of a Farmed Cyprinid Species	66
2.7 The Urgent Need for Comparative Cyprinid Genomics	68
2.7.1 Genome Maps Need to Be Established in Farmed Cyprinids	68
2.7.2 More Genomic and cDNA Libraries Are Needed	69
2.7.3 Comparative Transcriptomics of Cyprinids – A Treasure Trove Waiting to Be Opened	69
2.7.4 A Call for Cross-compatible Cyprinid and Teleost Databases	70
2.8 Synopsis	70
References	71

**3 Catfish**

Z. Liu	85
3.1 Introduction	85
3.2 Construction of Genetic Maps	87
3.2.1 Development and Evaluation of Molecular Markers	88
3.2.2 Development of Type I Markers	88
3.2.3 Resource Families and Linkage Maps	89
3.2.4 A Summary of the Linkage Map	90
3.3 QTL Mapping and Identification of Candidate Genes	90
3.4 Landscape of the Catfish Genome	90
3.5 BAC Libraries and Physical Mapping	92
3.6 EST Analysis and Transcriptome Analysis	93
3.7 Systematic Characterization of Genes and/or Full-Length cDNAs	95

3.8 Future Perspectives ..... 96  
References ..... 97

**4 Tilapias**

A. Cnaani, G. Hulata ..... 101  
4.1 Introduction ..... 101  
4.1.1 Brief History: Center of Origin, Domestication,  
Dissemination ..... 101  
4.1.2 Zoological Descriptions ..... 101  
4.1.3 Economic Importance ..... 103  
4.1.4 Breeding Objectives and Classical Breeding Achievements ... 103  
4.1.5 Classical Marker Development and Application ..... 104  
4.1.6 Development of DNA Markers ..... 104  
4.1.7 Limitations of Conventional Genetics and Breeding  
Approaches and the Utility of Molecular Mapping ..... 105  
4.2 Genetic Mapping in Tilapia ..... 105  
4.2.1 First-Generation Maps ..... 105  
4.2.2 Second-Generation Map ..... 105  
4.2.3 Physical Mapping ..... 108  
4.3 Gene Mapping ..... 108  
4.4 QTL in Tilapias ..... 109  
4.4.1 Detection of QTL ..... 109  
4.4.2 Gene–Trait Association ..... 112  
4.5 Future Scope and Related Tilapia Genomic Research ..... 112  
References ..... 112

**5 European Sea Bass**

F.A.M. Volckaert, C. Batargias, A. Canario, D. Chatziplis, D. Chistiakov,  
C. Haley, A. Libertini, C. Tsigenopoulos ..... 117  
5.1 Introduction ..... 117  
5.1.1 History ..... 117  
5.1.2 Zoological Descriptions ..... 118  
5.1.3 Economic Importance ..... 120  
5.1.4 Biodiversity and Strain Evaluation ..... 120  
5.1.5 Strain Testing, Breeding Objectives, and Classical Breeding ... 122  
5.2 Construction of Genetic Maps ..... 123  
5.3 Gene Mapping ..... 124  
5.4 Studies on Quantitative Trait Loci (QTL) ..... 125  
5.4.1 Target Traits ..... 125  
5.4.2 Genome Scan ..... 127  
5.4.3 QTLs Detected ..... 128  
5.5 Marker-Assisted Breeding ..... 128  
5.6 Advanced Research ..... 129  
References ..... 130

**6 Japanese Flounder**

C. Castaño, K. Kobayashi, M.R.M. Coimbra, K. Fuji, T. Sakamoto, N. Okamoto 135  
6.1 Introduction ..... 135  
6.1.1 Economic Importance and Current Status ..... 135  
6.1.2 Breeding Objectives and the Utility of Molecular Mapping .... 135

6.2	Molecular Markers .....	136
6.2.1	Available Markers .....	136
6.2.2	Application of Molecular Markers in Aquaculture and Population Studies .....	136
6.3	Genetic Linkage Maps .....	137
6.3.1	First-Generation Genetic Linkage Map .....	137
6.3.2	Second-Generation Genetic Linkage Map .....	137
6.3.3	Marker–Centromere Map .....	146
6.4	Application of Genetic Linkage Maps and Future Prospects .....	146
6.4.1	Quantitative Trait Loci Studies .....	146
6.4.2	Future Prospects .....	147
	References .....	147

## **7 Shrimp**

A.K. Dhar, B. Read, R.A. Bullis .....	149	
7.1	Introduction .....	149
7.1.1	Biosecurity, Domestication, and Development of Specific Pathogen Free Shrimp .....	149
7.2	Genetic Markers and Linkage Maps in Shrimp .....	152
7.2.1	Genetic Markers .....	152
7.2.2	Linkage Maps of Shrimp .....	153
7.3	Efforts in Reverse Genetics .....	154
7.3.1	Expressed Sequence Tag (EST) Analysis .....	155
7.3.2	mRNA Differential Display .....	156
7.3.3	Microarray Analysis .....	157
7.4	Future Perspectives .....	159
	References .....	159

## **8 Oysters**

X. Guo, Y. Wang, L. Wang, J.-H. Lee .....	163	
8.1	Introduction .....	163
8.2	The Oyster Genome .....	164
8.2.1	Chromosome Number .....	164
8.2.2	Genetic Length .....	164
8.2.3	Genome Size .....	164
8.3	Construction of Genetic Maps .....	165
8.3.1	Brief History .....	165
8.3.2	First-Generation Maps .....	166
8.3.3	Mapping with Codominant Markers .....	166
8.3.4	Comparative and Cytogenetic Mapping .....	169
8.4	Gene Mapping .....	169
8.5	QTL Mapping and Marker-Assisted Breeding .....	171
8.5.1	Growth and Shell Characteristics .....	171
8.5.2	Disease Resistance .....	171
8.5.3	Marker-Assisted Breeding .....	172
8.6	Advanced Genomic Resources .....	172
8.6.1	Physical Mapping .....	172
8.6.2	ESTs and Microarrays .....	172

8.6.3	Whole-Genome Sequencing .....	173
8.7	Conclusions and Future Prospects .....	173
	References .....	173
