Part I Face Recognition Applications

Skin-based Face Detection-Extraction and Recognition of Facial Expressions

<i>N. Bourbakis and P. Kakumanu</i>	3
1 Introduction	3
2 Neural color constancy based skin detection	4
3 Image segmentation	5
4 Local region graph (Facial feature region graph)	6
4.1 Facial feature matching using local graph	7
5 Skin region synthesis	9
5.1 Neighbor region searching and region synthesis	9
6 Matching multiple regions with Local Global (LG) Graph method ..	11
6.1 Image Representation with Local Global (LG) Graph	12
6.2 LG Graph matching	13
7 Experimental results	18
7.1 Effect of feature shape and spatial deformations on LG graph matching	18
7.2 Effect of the missing facial features (nodes) and partial LG graph matching	19
8 Extending LG Graph method for recognizing facial expressions	20
9 Conclusions	22
References	23

Facial Image Processing

<i>Xiaoyi Jiang and Yung-Fu Chen</i>	29
1 Introduction	29
2 Removal of glasses	31
3 Facial expression synthesis	34
4 Eye synthesis	36
5 Redeye removal	40

VIII Contents

6	Restoration of facial images	42
7	Artistic processing of facial images	42
8	Facial weight change	43
9	Conclusion	43
	References	45

**Face Recognition and Pose Estimation
with Parametric Linear Subspaces**

	<i>Kazunori Okada and Christoph von der Malsburg</i>	49
1	Introduction	49
2	Problem Overview and Definitions	52
	2.1 Statistical Models of Pose Variation	52
	2.2 Pose-Insensitive Face Recognition	53
3	Parametric Linear Subspace Model	56
	3.1 Linear PCMAP Model	56
	3.2 Parametric Piecewise Linear Subspace Model	61
4	Interpersonalized Pose Estimation	64
5	Experiments	65
	5.1 Data Set	65
	5.2 Personalized Pose Estimation and View Synthesis	66
	5.3 Pose-Insensitive Face Recognition	69
	5.4 Interpersonalized Pose Estimation	70
6	Conclusion	71
	References	72

Part II Spatio-Temporal Patterns

**4D Segmentation of Cardiac Data Using Active Surfaces
with Spatiotemporal Shape Priors**

	<i>Amer Abufadel, Tony Yezzi and Ronald W. Schafer</i>	77
1	Introduction	78
2	Method	81
	2.1 Combining Space and Time	81
	2.2 Adding time to shape-based segmentation methods	82
	2.3 Generating Training Data	84
	2.4 Segmentation	88
3	Periodic data	90
4	Results	90
	4.1 Consistency Tests	91
	4.2 Accuracy Tests	96
5	Conclusion	99
	References	99

Measuring Similarity Between Trajectories of Mobile Objects	
<i>Sigal Elnekave, Mark Last and Oded Maimon</i> 101	
1	Introduction 101
2	Related Work 103
2.1	Spatio-temporal data collection 103
2.2	Representing spatio-temporal data 104
2.3	Spatio-temporal data summarization 106
2.4	Querying spatio-temporal data 107
2.5	Indexing trajectories of moving objects 108
2.6	Clustering moving objects and trajectories 110
2.7	Spatio-temporal group patterns mining 111
2.8	Incremental maintenance of mobile patterns 113
2.9	Predicting spatio-temporal data 113
2.10	Spatio-temporal similarity measures 114
2.11	Spatio-temporal data generation 115
2.12	Summary of related work 116
3	Specific methods 116
3.1	An Algorithm for MBB-Based Trajectory Representation 116
3.2	Defining a new similarity measure 119
3.3	Clustering trajectories with the K-Means Algorithm 120
3.4	Using incremental approach for clustering 121
4	Evaluation Methods 121
5	Evaluation Experiments 122
5.1	Generating spatio-temporal data 122
5.2	Detailed Results 123
6	Conclusions 125
	References 126

Part III Graph-Based Methods

Matching of Hypergraphs — Algorithms, Applications, and Experiments

<i>Horst Bunke, Peter Dickinson, Miro Kraetzl, Michel Neuhaus and Marc Stettler</i> 131	
1	Introduction 131
2	Preliminaries 133
3	Hypergraph Matching 137
4	Algorithms for Hypergraph Matching 140
5	Experimental Results 144
5.1	Experiments on Synthetic Data 144
5.2	Experiments on Pseudo-real and Real Data 147
6	Conclusions 152
	References 153

Feature-Driven Emergence of Model Graphs for Object Recognition and Categorization
Günter Westphal, Christoph von der Malsburg and Rolf P. Würtz 155

1 Introduction 156

2 Learning Set, Partitionings, and Categories 158

3 Parquet Graphs 162

 3.1 Similarity Function 164

 3.2 Local Feature Detectors 164

4 Learning a Visual Dictionary 165

 4.1 Feature Calculators 165

 4.2 Feature Vectors 167

5 Preselection Network 168

 5.1 Neural Model 170

 5.2 Position-Invariant Feature Detectors 170

 5.3 Weighting of Feature Detectors 171

 5.4 Neurons, Connectivity, and Synaptic Weights 172

 5.5 Saliencies 175

 5.6 Selection of Salient Categories and Model Candidates 175

6 Verification of Model Candidates 177

 6.1 Construction of Graphs 177

 6.2 Matching 181

 6.3 Model Selection 182

7 Experiments 182

 7.1 Object Recognition 183

 7.2 Object Categorization 191

8 Summary and Future Work 196

References 197

Part IV Special Applications

A Wavelet-based Statistical Method for Chinese Writer Identification
Zhenyu He and Yuan Yan Tang 203

1 Introduction 203

2 A Classic Method for Writer Identification:
Two-Dimensional Gabor Model 206

3 Our Algorithm for Writer Identification 207

 3.1 Preprocessing 208

 3.2 Feature Extraction Based on Wavelet 209

 3.3 Similarity Measurement 214

4 Experiments 215

 4.1 Identification performance evaluation 1 215

 4.2 Identification performance evaluation 2 217

5	Conclusions	219
	References	219
Texture Analysis by Accurate Identification of a Generic Markov–Gibbs Model		
	<i>Georgy Gimel'farb and Dongxiao Zhou</i>	221
1	Introduction	221
2	Identification of a generic Markov-Gibbs model	222
	2.1 Basic notation	222
	2.2 Generic MGRF with pairwise interaction	223
	2.3 Accurate first approximation of potentials	224
	2.4 Model-based interaction maps (MBIM)	228
3	Characteristic Structure and Texels	232
4	Texture Synthesis by Bunch Sampling	236
5	Comparisons and conclusions	237
	References	244
