Contents

0 Introduction 1

1 Gibbs Measures 3
A. Gibbs Distribution 3
B. Ruelle's Perron-Frobenius Theorem 8
C. Construction of Gibbs Measures 13
D. Variational Principle 16
E. Further Properties 22
References 26

2 General Thermodynamic Formalism 29
A. Entropy 29
B. Pressure 32
C. Variational Principle 36
D. Equilibrium States 42
References 43

3 Axiom a Diffeomorphisms 45
A. Definition 45
B. Spectral Decomposition 47
C. Markov Partitions 51
D. Symbolic Dynamics 56
References 58

4 Ergodic Theory of Axiom a Diffeomorphisms 61
A. Equilibrium States for Basic Sets 61
B. The Case $\phi = \phi^{(u)}$ 64
C. Attractors and Anosov Diffeomorphisms 69
References 72

Index 75

These notes came out of a course given at the University of Minnesota and were revised while the author was on a Sloan Fellowship.
