
Contents

The Sun: A Slowly Rotating Star

| | |
|--|----|
| <i>J.-P. Zahn</i> | 1 |
| 1 The Sun Rotates | 1 |
| 2 The Sun Is a Slow Rotator | 3 |
| 3 Solar Rotation in the Past | 4 |
| 4 How Did the Sun Lose Its Angular Momentum? | 5 |
| 5 The Interior Rotation Unveiled by Helioseismology | 6 |
| 6 The Thin Tachocline Puzzle | 7 |
| 7 Angular Momentum Transported by Internal Motions in the Radiation Zone | 8 |
| 8 Is a Magnetic Field Able to Rigidify the Solar Rotation? | 9 |
| 9 The Solution: Transport by Internal Gravity Waves | 11 |
| 10 Perspectives | 13 |
| References | 13 |

What Is Coming: Issues Raised from Observation of the Shape of the Sun

| | |
|--|----|
| <i>J.-P. Rozelot</i> | 15 |
| 1 Introduction | 15 |
| 2 Observations of the Solar Shape | 19 |
| 3 How Large Are the Temporal Variations of the Solar Diameter? | 21 |
| 4 Solar Shape and Rotation | 23 |
| 5 The Solar Shape and Fundamental Physics | 25 |
| 6 Conclusion | 35 |
| References | 38 |

Effects of Rotation on Stellar p-Mode Frequencies

| | |
|---|----|
| <i>M.J. Goupil</i> | 45 |
| 1 Introduction | 45 |
| 2 Definitions and Orders of Magnitude | 46 |
| 3 A Wave Equation for a Rotating Star | 50 |
| 4 A Variational Principle | 58 |

VIII Contents

| | | |
|---|---|-----|
| 5 | Slow Rotators | 59 |
| 6 | Moderately Rotating Pulsating Stars | 63 |
| 7 | Fast Rotators: Nonperturbative Approaches | 80 |
| 8 | Observed Rotational Splittings and Forward Inferences | 85 |
| 9 | Inversion for Rotation | 87 |
| | References | 95 |
| Approaching the Low-Frequency Spectrum of Rotating Stars | | |
| <i>M. Rieutord</i> | | 101 |
| 1 | Introduction | 101 |
| 2 | Waves in a Rotating Fluid | 102 |
| 3 | Inertial Modes | 103 |
| 4 | The Poincaré Equation | 107 |
| 5 | The Gravito-inertial Modes | 114 |
| 6 | How Can We Compute These Modes? | 116 |
| 7 | Conclusions | 119 |
| | References | 120 |
| The Rotation of the Solar Core | | |
| <i>S. Turck-Chièze</i> | | 123 |
| 1 | Introduction | 123 |
| 2 | Evolution of the Solar Modeling | 124 |
| 3 | The Constraints Coming from Helioseismology | 128 |
| 4 | Confrontation of the Seismic Internal Rotation Profile to the Theoretical Profiles | 133 |
| 5 | Perspectives | 133 |
| 6 | Conclusions | 134 |
| | References | 135 |
| Physics of Rotation in Stellar Models | | |
| <i>G. Meynet</i> | | 139 |
| 1 | Physics of Rotation | 139 |
| 2 | “Spinstars” at Very Low Metallicities? | 165 |
| | References | 167 |
| Long Baseline Interferometry of Rotating Stars Across the HR Diagram: Flattening, Gravity Darkening, Differential Rotation | | |
| <i>A. Domiciano de Souza</i> | | 171 |
| 1 | Introduction | 171 |
| 2 | Principles of Optical/IR Long Baseline Interferometry (OLBI) | 172 |
| 3 | Modelling Fast Rotation for Stellar Interferometry: The “Roche–von Zeipel” Model | 175 |
| 4 | Rapid Rotation Across the HR Diagram: Results from Interferometry | 179 |
| 5 | Stellar Differential Rotation from Spectro-interferometry | 188 |
| 6 | Conclusions and Future Prospects | 193 |
| | References | 193 |

Is the Critical Rotation of Be Stars Really Critical for the Be Phenomenon?

| | |
|--|-----|
| <i>Ph. Stee and A. Meilland</i> | 195 |
| 1 Introduction | 195 |
| 2 α Arae | 196 |
| 3 κ CMa | 199 |
| 4 Achernar | 201 |
| 5 A Possible Clue for the Be Phenomenon? | 203 |
| References | 204 |

On the Rotation of A-Type Stars

| | |
|---|-----|
| <i>F. Royer</i> | 207 |
| 1 Introduction | 207 |
| 2 Measuring Rotational Broadening | 209 |
| 3 Differential Rotation | 220 |
| 4 Gravity Darkening | 221 |
| 5 Distribution of Rotational Velocities | 224 |
| References | 227 |

The Solar Magnetic Field: Surface and Upper Layers, Network and Internetwork Field

| | |
|---|-----|
| <i>V. Bommier</i> | 231 |
| 1 Introduction | 231 |
| 2 The Basic Ingredients of the Magnetic Field Measurement in Astrophysics | 232 |
| 3 The Magnetic Field Observed in Solar Prominences | 243 |
| 4 The Magnetic Field Observed in the Photosphere | 250 |
| References | 259 |
