<b>Abstract</b>	<b>vii</b>
<b>Kurzfassung</b>	<b>viii</b>
<b>List of Abbreviations</b>	<b>xiii</b>
<b>List of Symbols</b>	<b>xv</b>
<b>List of Figures</b>	<b>xix</b>
<b>List of Tables</b>	<b>xxi</b>
<b>1 Introduction</b>	<b>1</b>
<b>2 Statistical Accuracy</b>	<b>3</b>
2.1 Discrete event simulation . . . . .	3
2.2 State space coverage . . . . .	4
2.2.1 Effect of correlation . . . . .	4
2.2.2 Rare events . . . . .	12
2.3 Parallelisation . . . . .	14
2.3.1 Functional division . . . . .	15
2.3.2 Load division . . . . .	15
2.3.3 Model division . . . . .	15
2.3.4 Efficiency . . . . .	16
2.4 Statistical evaluation with LRE . . . . .	16
<b>3 Simulation Speed-up with RESTART</b>	<b>19</b>
3.1 RESTART fundamentals . . . . .	19
3.1.1 Motivation . . . . .	19
3.1.2 Requirements . . . . .	21
3.1.3 Procedure . . . . .	21
3.1.4 System state . . . . .	22
3.1.5 Threshold setting . . . . .	22
3.2 Importance function . . . . .	24

3.2.1	Multivariate importance functions . . . . .	24
3.2.2	Random variable of interest . . . . .	25
3.2.3	Merging LREs . . . . .	26
3.3	States in single-step . . . . .	26
3.3.1	Required size of collection . . . . .	26
3.3.2	State usage and limitation . . . . .	28
3.3.3	State selection . . . . .	29
3.3.4	Combination of single-step and global-step . . . . .	30
3.4	Threshold refinement . . . . .	31
3.4.1	Partitioned service . . . . .	31
3.4.2	Non-RESTART simulations . . . . .	33
3.4.3	RESTART simulations . . . . .	36
3.4.4	Conclusions on threshold refinement . . . . .	39
<b>4</b>	<b>Distributed RESTART</b>	<b>41</b>
4.1	Methodological aspects . . . . .	41
4.1.1	Decomposition . . . . .	41
4.1.2	Communication . . . . .	44
4.1.3	Merging statistics . . . . .	45
4.1.4	Decision . . . . .	48
4.2	Simulations . . . . .	48
4.2.1	Platforms . . . . .	48
4.2.2	Network technology . . . . .	49
4.2.3	Simulation results . . . . .	50
4.3	Conclusions . . . . .	53
<b>5</b>	<b>Short-Term Dynamic Simulation Concept</b>	<b>55</b>
5.1	Classification . . . . .	55
5.2	Concept . . . . .	57
5.2.1	Snapshot . . . . .	57
5.2.2	STD windows . . . . .	59
5.3	Analytical investigation . . . . .	60
5.3.1	Dynamic simulation method . . . . .	61
5.3.2	Short-term dynamic simulation . . . . .	72
5.3.3	Group correlation . . . . .	77
5.3.4	Gain . . . . .	88
5.4	Combined speed-up approaches . . . . .	92
5.4.1	STD and parallelisation . . . . .	92
5.4.2	STD and RESTART . . . . .	93
5.5	Conclusions . . . . .	96

<b>6</b>	<b>STD Simulation of UMTS Models</b>	<b>97</b>
6.1	Introduction to UMTS . . . . .	97
6.1.1	Architecture . . . . .	97
6.1.2	Power control . . . . .	98
6.1.3	Regular scenario . . . . .	98
6.1.4	Realistic scenario . . . . .	99
6.2	UMTS simulation concept . . . . .	99
6.2.1	User profiles . . . . .	101
6.2.2	Operational environment . . . . .	102
6.2.3	Mobility . . . . .	102
6.2.4	Session . . . . .	104
6.2.5	User generation . . . . .	107
6.3	Evaluation of dynamic QoS . . . . .	108
6.3.1	Session based . . . . .	109
6.3.2	Location or system based . . . . .	111
6.3.3	Common methods . . . . .	112
6.3.4	Detailed radio resource management . . . . .	112
6.4	Soft-handover . . . . .	113
6.4.1	Basic Principle . . . . .	113
6.4.2	Static and dynamic soft-handover simulations . . . . .	115
6.4.3	Algorithm . . . . .	115
6.4.4	Simulations . . . . .	117
6.5	STD performance . . . . .	120
6.5.1	Choice of convergence indicator . . . . .	120
6.5.2	Comparison with analytical investigation . . . . .	121
6.5.3	STD convergence . . . . .	125
6.5.4	STD window size . . . . .	129
6.6	Speed-up by event grouping . . . . .	131
6.6.1	Grouping and weighting . . . . .	132
6.6.2	Simulation results . . . . .	133
6.7	Conclusions . . . . .	135
<b>7</b>	<b>Conclusions</b>	<b>137</b>
<b>A</b>	<b>Mathematical Derivations</b>	<b>139</b>
<b>B</b>	<b>LRE example behaviour</b>	<b>143</b>
	<b>Bibliography</b>	<b>145</b>
